Artificial intelligence
reaches novice users

by Philip Hunter

EXPERT systems for the general user have come a step closer with the launch of a package from major UK software house SPL, which may bring the benefits of research in artificial intelligence nearer to everyday use.

Expert systems consist of two parts: a knowledge database and a program to draw conclusions from it. There are a number already

commercially available, but most are tailored to specific applications like geological surveying and medical diagnosis.

Now a general-purpose package has been written with the inexperienced user in mind.

SPL has taken the veil off Sage, the package which has been simmering at its Abingdon offices for over two years. It will be available on a consultancy charge of about £10,000 for mainframe users, and £2,000 for microcomputer users, to allow them to build their own. Sage is pitched at the commercial market for the development of expert consultation systems and for providing intelligent links between large computer programs and control systems. But the company concedes that it will at first appeal only to medium-sized and large organisations ready to invest in the unknown.

"We want expert systems to apply generally," says Jon Young, head of SPL's expert systems group. "We also want to develop specifically tailored packages."

Sage will be marketed abroad and there are particular hopes for

success in the US, where a different approach has been taken to artificial intelligence. With a huge investment in individual systems based on trial and error, American companies and universities have made little attempt to produce general-purpose packages.

SPL is not the first to sell general expert system generators. Intelligent Terminals of Oxford had a system called ALX available for nearly two years.

The company has sold licences to about ten UK companies at £10,000 each, as well as several more in the US, including DBC and IBM at Palo Alto. SPL itself was the first to buy a licence for ALX in July 1980.

But Young argues that several features make Sage more appealing to users ignorant of expert systems.

He cites the ability to accept arithmetic at run time, which Professor Michie of IITL admits ALX cannot do.

Michie emphasises that Sage is only the third system of its kind and that it does not offer fundamentally new facilities.

YOUNG "We want expert systems to apply generally."

Intel crash
near to
settlementby Howard Karlen
and Boris Sedacca

ONE of the most spectacular computer leasing crashes of recent times now appears close to a conclusion. Intel Corp. has agreed to settle its claims against powerful vendor of IBM compatible mainframes, and has agreed to pay back the company's claims.

The bankrupt San Francisco based computer leasing company took a serious blow when Intel introduced its range of medium-sized mainframes, the 4300 series, in January 1979, rendering its own stock of IBM mainframes obsolete.

The company now appears to have reached agreement with its creditors on a re-organisation plan comprising a package of debt securities, shares and cash for its \$900 million-odd outstanding debts. Some observers believe that the case might be concluded by the end of the year.

The settlement with Lloyd's not directly related to last week's announcement, but is "proceeding on a parallel track", an Intel spokesman said.

Conditional settlement is expected to be completed by the end of March and has three elements, he said.

● Lloyd's would settle directly with Intel owner-lessees (the bank and financial institutions) and release Intel from its liability. In 1979, liability stood at a staggering \$100 million, but had dropped to about \$100 million by the end of September 1981 as the number of users exercising their early termination option declined and new suits were settled. This figure has declined still further.

● Intel and Lloyd's would mutually release each other of claims against the other.

● Lloyd's will pay Intel \$4 million in cash and will release a \$2 million escrow account it currently holds which could only be released by agreement from both parties.

Altergo
into IBM
systems
selling

by Andrew Thomas

UK systems house Altergo has set itself up in the unusual position of a second source of IBM's mid-range mainframes. The company bought 15 of the 4300 range with plans to sell them off as complete packages, including applications software and systems programming expertise.

Altergo managing director Michael Jones said that it was part of the company's "black box" strategy to supply everything the end user would need in one package. The company had also launched what it claimed as the first training programme in the UK for IBM's Small Systems Executive (SSE).

4300s of various types are on offer at Altergo at a cost of £1.5 million. Eleven of these are to be used in the firm's European offices, and the remaining 15 are to be sold to other users.

Jones said: "We're really after the big and places IBM aren't touching. IBM salesmen are not motivated to sell machines on a one-off basis."

When the 4300 series was launched in 1979, IBM said it would require no systems programming effort on the part of the user. Experience in the field has demonstrated that this was an optimistic prediction.

As the level of support required by the end user does not usually warrant the services of a full-time systems programmer, Altergo has launched a systems engineering service to meet this demand. The service offers a range of options including software consultancy, training, maintenance, troubleshooting, and utility writing.

JONES... Altergo is after the big and places IBM can't be bothered with.

Users of the service are also offered regular site visits of systems programmers at a minimum frequency of once a month. Trouble-shooting is carried out on a one-off basis.

The company is also offering a range of applications software written for the 4300 range. Accounts payable and purchase order packages are available now, and later this year, general ledger and accounts receivable will also be marketed.

Jones commented that the packages were initially designed for Altergo's own use when it was discovered that the packages available for the 4300 were "so pathetic" that it was better to write their own, which are now being made available to other 4300 users.

"These developments mean that we can now offer potential users of the 4300 range a total solution for all basic financial business operations," concluded Jones.

'Buy UK
micros'—
govt told

by Robert Parry

MORE British microcomputer manufacturers are pressing to be allowed on to the government's list of its own preferred suppliers, and the signs are that they are succeeding.

The short-list drawn up by the Central Computer and Telecommunications Agency (CCTA) for all purchases of microcomputers by central government departments is to be reviewed.

In the original list set out last March, only three of the nine companies selected—Research Machines, Casu and BMD—built machines in this country. The rest, including big names Commodore and Apple (formerly under its distributor Microsource), imported equipment from the US.

But there is soon to be a second competition for contracts for the standard microcomputer range. The contracts give discounts to the governments and specify delivery and maintenance arrangements.

Hope that more British manufacturers will appear on the list comes from support by Information Technology Minister Kenneth Baker at a seminar last week organised by the British Microcomputer Manufacturers Group, and attended by civil servants buying micros for the public sector.

Baker said that although there were no whales among British

micro manufacturers, there were lively minnows, and he encouraged people in the public sector to buy British.

The message was backed up by Gerald Watson, director of the CCTA, who said that UK microcomputers had a major part to play in the next round.

David Broad, BMDG chairman, welcomes such moves. "There are some good schemes—like the micros in schools scheme—the Micros and the micro course. They are very good for a few vendors, but I feel more can be done for more British manufacturers."

Casu is very happy with the relationship with government departments. Research Machines gained fewer orders than expected but is pleased to be on the list.

THE long-awaited microcomputer from Olivetti is set to appear at this year's Hannover Fair in April. It will be a 16-bit machine, based on a Zilog micro, and with complete compatibility with the IBM Personal Computer and the Sirius I, both also Intel-based. It is expected to sell at about \$4,000 for a basic system, undercutting the equivalent IBM and Sirius models priced at about \$5,000.

ENTRIES are already coming in for the 1982 Computastars competition, sponsored by Computer Weekly. The four regional heats are scheduled to take place in April, and places will be allocated as first, second, third, fourth, and fifth place. Complete the entry form on page 6.

BROAD... "More can be done."

IBM drops
laser discs

by Donald Kennett

A QUESTION mark hangs over IBM's commitment to laser disc storage technology, following its decision to stop selling video disc drives through Disco-Vision Associates.

Disco-Vision was set up by IBM along with US entertainment giant MCA Corp.

DVA sold video disc players built by Pioneer Electronic Corp of Japan, but manufactured video disc players in-house.

The DVA products were aimed at the consumer market but the company could have followed Philips-Thomson-CSF of France and Xerox into laser disc storage for data.

Nixdorf
unscathed

by Kevin Cahill

DISPITE the poor business climate in Europe, Nixdorf has pushed sales up 24% in 1981.

Germany's main independent computer and office automation company had turnover of DM1.93 billion (approx £439 million) compared with 1981.56 billion (£355 million) in 1980.

Reporting an order book 18% up on the beginning of 1981, the company said that sales at home and abroad had expanded, with growth in the European market particularly strong.

This is in sharp contrast to the majority of American computer companies in Europe.

Harris UK cuts back
12 of its workforce

by Donald Kennett

LOW demand has forced a contraction of staff at the Slough office of Harris Information Systems.

The company has made 12 of its sales and administration staff redundant out of a workforce of 150.

The division's UK general manager Frank Walters said that orders for products across its whole range were being delayed as companies considered their spending more carefully. The necessary economies had been made after looking at operating overheads and the marketing and sales teams had been merged, allowing the func-

tions to be handled by a smaller team.

He stressed that the engineering and software support teams had not been cut. The staff who left last Friday had been at the company for between six months and five years.

Making the cuts was a local UK decision unrelated to the company's performance in the US, although the first quarter results published last week showed downturn in the company's semiconductor division.

The slowing down in orders was also attributed to the strength of the dollar.

Councils told to sell software

● From front page

THE mainframe on an office desk is one step closer following Hewlett-Packard's announcement last week of a 32-bit minicomputer which brings a new level of chip density.

The company revealed details of a 32-bit chip which also began Hewlett-Packard's long awaited entry into this minicomputer market.

The announcement came in a paper to the International Solid State Circuits Conference (ISSCC) in San Francisco last week. The paper is the world's leading authority for microelectronic technology and the scene of previous announcements of chip design.

Last year saw Hewlett-Packard's announcement of design plans for a 32-bit microprocessor.

He predicts microcomputers linked to mainframes, and users talking to users whatever the environment. "As far as I'm concerned they are all machines, offering facilities," he said.

"The standard here is so high that we could eat commerce," said Cunningham. "Once established, this will showball into something big."

Proposals for the Construction of Local Government Microcomputer Applications Development Centre, 3 Buntingford Gate, London SW18 6TH. £10 to local authorities. £4 to others.

HP puts mainframe close to desk-top

by Kevin Cahill

THE mainframe on an office desk is one step closer following Hewlett-Packard's announcement last week of a 32-bit minicomputer which brings a new level of chip density.

The company revealed details of a 32-bit chip which also began Hewlett-Packard's long awaited entry into this minicomputer market.

The announcement came in a paper to the International Solid State Circuits Conference (ISSCC) in San Francisco last week. The paper is the world's leading authority for microelectronic technology and the scene of previous announcements of chip design.

Last year saw Hewlett-Packard's announcement of design plans for a 32-bit microprocessor.

Now the company's Super Chip Set has turned out to contain six chips, as against rival Intel's three-chip set, but it breaks ground in two areas of technology.

The 128K RAM, the discrete memory unit in the set, is based on a single chip which contains 560,000 semiconductor devices.

ISSCC report—UK could gain from embargo—page 2

making it a true VLSI (very large scale integrated circuit) device. And the set is based on MOS technology which uses one micro wide circuits compared to the two or three micro circuits in most other production devices (a micron is one millionth of a metre).

The whole chip set contains six separate devices, the CPU, a memory controller, RAM, ROM, input/output processor and clock generator.

According to a spokesman for Hewlett-Packard, the Super Chip Set is now in production and is being supplied to the company's designers for use in a product which will be introduced "in about a year". It will not be available to outside buyers and is intended solely for internal use.

But it gives the company a 32-bit product for the first time, as well as pushing the level of complexity a step further.

No details of the operating system or other software are available, or are specifications such as the MIPS (millions of instructions per second) rating of the machine.

Hewlett-Packard's R&D manager, Dana Seconbe, would only say that the company had performed benchmarks.

According to commentators at the ISSCC, Hewlett-Packard will be attempting to implement its current operating systems on the Super Chip Set because it is compatible with forward compatibility on its software.

Meanwhile Intel, now Hewlett-Packard's main rival in the 32-bit microchip market, has been dubbed a micromainframe, by its critics. It is being supplied to potential users in prototype form.

The Intel device is based on a set of three chips which come on a single board at a price of about \$2,000.

JACKS... A second operating system for Data General's business micro.

DG adds 'outside' software

by Philip Hunter
USERS of Data General's small business computer now have access in the full range of applications packages written by UK software house Micro Products Software Ltd (MPSL), following a deal between the two companies.

Data General has implemented MPSL's BOS/5 operating system on its Enterprise 1000 desk-top micro in order to use MPSL's business software, which includes the usual battery of ledger and invoicing packages and database management.

MPSL is not the only company writing under the BOS/5 operating system, so users of the Enterprise will also be able to run software written elsewhere.

But BOS/5 is not available on larger systems, so there will be no upgradability. At the same time Data General is going for a single user system, based on the existing floppy disc, to begin with.

"But when Winchester hard discs become available on the Enterprise, we will discuss multi-user systems," says MPSL managing director Alan Jacks.

The BOS/5 operating system will run in addition to Data General's proprietary operating system on the Enterprise. "We will continue to develop packages under our own system as well," comments a Data General spokesperson.

So Enterprise users will have to contend with systems written under two operating systems. But Jacks dismisses this as unimportant.

"Most businessmen couldn't care about the operating system," he says.

The Enterprise is based on Data General's 16-bit microNova microprocessor.

There is not seen to be any competition from the new IBM personal computer, which according to Jacks, is too small to run the software.

HP to create 200 more jobs in UK this year

by David Craver
CONTINUED major investment in the UK is promised by Hewlett-Packard after a year in which its UK after-tax profits jumped 35%, on top of a 19% increase in turnover.

"Yet another successful year in a long history of growth," said Roger Cooper, manager of UK computer operations. Compound growth has been 28% annually over the past four years, Cooper said, with sales in the year ended October 31, 1981 just short of £119 million. Net earnings rose to £8.4 million.

Some 200 jobs were added by HP in the UK in 1981, and another 200 will be created in 1982, which will take the company's workforce in this country to over 2,000. Last month an international "software factory" opened in Pinewood, which will serve as HP's international centre for development of products for the interactive office.

In 1982 Pinewood will release electronic mail and electronic filing cabinet products to be marketed worldwide. These will be

added to networking and word processing packages for the office, released last year.

Cooper says that HP is a "company that usually gets its impetus from its products," and he notes that 70% of its sales in 1981 were based on products announced in 1978 or later. He believes that HP's experience with networks systems will stand it well when competing for the automated office market.

While he praises, for example, Wang's word processing expertise, Cooper says HP has a definite edge in having tested and debugged software for distributed systems.

Other UK investments HP announced in 1981 include a disc manufacturing plant in Bristol which by 1985 will employ 1,300 people; a new centre for customer support; and a 50% increase in the South Queensferry telecommunications facility near Edinburgh.

HP's worldwide results for 1981, which were released in December, showed sales of \$3.6 billion, up 15% and net earnings of \$312 million, up 16%.

COOPER... "Company gets its impetus from its products."

SALES BRIEF

First system for REME

COMPUTER Technology's Ex-Momentum non-stop computer system is to go to REME, the Royal Electrical and Mechanical Engineers, for use in its Domesday repair centre. Momentum is a range of hardware and software packages designed to add fault recovery facilities to existing CIL 8000 series machines.

REME's package will be added to its 8066 and it will release its R&D work as 8046 currently used for back-up.

TV success

WITH an order from London Weekend Television for a Honeywell DPS-8/20, Honeywell has now placed machines in 13 of the 15 UK television companies. LWT's system will be used to re-air-time sales software from Remedy Air Time Systems, replacing a Burroughs-based real-time bureau service. Success in the UK is leading Enterprise to sell its Honeywell-based system in the US and continental Europe.

College micros

HULL Technical College has installed 12 Triumph Adler Alpha microcomputers costing over £24,000 and supplied by Bell Business Machines. The micros will be used for adult education, initially in programming and operations, but later in non-computing subjects. As well as buying in software, the college has developed some of its own. Plans include a financial package and a number of emulators for communicating with mainframes.

Viewdata on tour

COMPUTEX has won its first travel industry order for a viewdata system. Summed Holidays, the second biggest tour operator specialising in trips to Greece, has installed Computex's viewdata software in its Digital Equipment PDP-11/44. Computex's first overseas installations will be in Brussels and New York in April. UK customers so far include retailers, nationalised industries and systems houses.

Trend for DHSS

PHICOM subsidiary Trend Communications has won an order from the Department of Health and Social Security for 450 data preparation terminals to process benefit payments via batch links between DHSS offices and computer centres. The terminals each include an edge-punched card reader, paper tape reader and punch and a printer. They are due to be installed by April.

Prime order

STOKE-BASED engineering firm George Hall Group has ordered a Prime 250 on which to base the activities of its new systems house subsidiary Hall Business Systems. Hall will sell Prime-based turnkey systems and operate a bureau service, both using financial software from Memory Computer Services of London.

For filming

BROWN Boveri Kent has won a £200,000 order from Ilford for two K90S Digital Equipment PDP-11 based control computers.

Viewdata highlighted at Info 82 Exhibition... Donald Kennett reports

'IT' - only way to cut rising office costs

VIEWDATA, telex, and voice operated telephone dialling were highlights of the Info 82 Exhibition last week, where IREX project director Kenneth Barnes described information technology as the only way that companies could cut administrative costs sufficiently to produce goods at a price the market could bear.

Office staff costs had risen 464% in the electricity had risen only 3%, and administration typically accounted for 40 to 50% of companies' costs. In contrast, factory floor production had risen 84% over the same period, largely through investment in capital equipment such as robots.

Only half of UK companies now use microelectronics, Barnes added, and the government sees promoting wider awareness of the potential benefits as crucial to the future of the country.

Private viewdata systems based on Canadian and French display coding schemes were announced by Pontier Computervision

Systems of Leeds and Beelins Southern of Staines at the show.

The Pontier system starts at £17,500 and can be expanded to hold up to 20,000 pages and support up to 64 terminals. The terminals are based on Motorola 6809 processors with 64Kbytes of RAM, but they need external modems to link across the telephone network. The editing terminal designed for the system is based on a Digital Equipment LSI-11/03 with two floppy disc drives, a graphics tablet and two colour monitors.

Beelins' French-style system is to be available later in the year in the form of a gold-sprayed Commodore Pet. The version on show was sprayed black and designed to display Prestel-format viewdata.

This version is supplied with a colour graphics printer claimed to be the first to be capable of printing from a viewdata screen. A dual floppy disc drive and the Bee private viewdata software take the price to £4,295. A later version will have an 80-column VDU display capability as well as the 40-co-

lumn of the viewdata format, and about the same time a telex adapter is to be added to the range of options.

Viewdata also featured in Zynar's demonstration of its Cluster One local network for Apples. The network was shown with six terminals attached, although it can support up to 64, and two applications were being shown for the first time, the network file server and the Messenger electronic mail system. The network now supports Apple IIIa as well as Apple IIa.

Other companies to feature viewdata included IBM, which launched viewdata facilities on its bureau service last month. Systime, which recently took on the Computex package, and Tandata, which demonstrated the Oki Microline 80 impact matrix printer printing monochrome Prestel graphics under the control of its Alphamatrix adapter.

The bureau Computer demonstrated the Thornton private viewdata system it has licensed

BARNES... "Wider awareness vital to country's future."

from Thorn. One of its first half-dozen clients for the service, the Borough of Kingston, showed its Kinglet private viewdata service - the first to be run by a local authority.

Kingston is one of three boroughs where the Department of Industry has funded the installation of 12 viewdata terminals to gauge public reaction to Prestel.

Kingston's terminals are installed in locations including four citizens' advice bureaux, a community project, a Post Office, a branch of Tesco and a Jobcentre. It also has terminals of its own to the six branches of the library.

By April, the service is to be available to domestic users.

It all depends what you mean by 'robot'

by Boris Sedacea
THE glamour of robotics is sparking off a debate about what constitutes a robot, with each industrialised country putting out a number for its robot population as a measure of progress.

The figures vary widely from country to country because some, like Japan, want to include machine tools in their definition of robots. Others, like Britain, use a purist definition which narrows the field.

According to Tom Brock, executive secretary of the British Robot Association, the definition of a robot is a device with at least three "degrees of freedom", the term used to describe axes of movement on a robot.

Now Brock has slammed the French for using their own definition of a robot, so inflating the figure for their robot population.

"The French always want to be ahead with everything so they give a figure of 38,000 for their robot population. The real figure (according to the BRA definition) is 600," he said.

"Switzerland says it has 8,000 robots while the figure is more like 15. When comparisons are made with the UK's robot population of

just over 700 robots against those types of figures, then one is not comparing like with like."

Brock also points out that the UK figure is for robots installed, not just robot sales. The BRA definition of robots places the UK in fifth place behind Japan (10,000), US (5,000), West Germany (2,300) and Sweden (1,700).

The number of robots put in place in the UK in 1981 was 342, which doubled the installed base to 713 systems.

BRA expects the UK robot population to outstrip that of the Japanese in ten years' time to a figure of about 10,000.

BROCK... "The French always want to be ahead."

How IT can aid the Minister

by Donald Kennett

THE Central Computer and Telecommunications Agency this week starts a major investigation into how information technology can improve efficiency in government departments.

An important target area is the work of Ministers and senior civil servants, although the investigating team is prepared to find that sophisticated integrated systems could upset Ministers' work more than they helped it.

Team leader Eileen Conn, who is responsible for new and novel applications implemented through the CCTA, said that the government currently spent about £150 million a year on computing and it was rising. The main concern was to get a payback from the hidden costs and ensure that new applications were both beneficial and cost justifiable.

The first phase of the investigation is a fact-finding exercise in which private secretaries are being asked to fill a questionnaire and discuss the activities in their offices.

The team has an open mind on what will emerge from this, but it expects to have some preliminary

CONN... Investigating computer use in government departments.

conclusions by May. If they are interesting to the computer industry, it will publish them.

This will lead to the next stage, which is to identify any applications for existing products which can be implemented quickly.

Finally they aim to identify areas for long-term discussion to build the foundations of an integrated information system which

can continue to be developed into the next century.

The team is in contact with many organisations concerned with the planning of office systems and works closely with the experimental projects in the Civil Service, such as the Xlonics local network in the Cabinet Office and the Zynar network of 12 Apple II's in the CCTA itself.

Dutch firm imports Tanel

by Donald Kennett

TANDATA Marketing has won a £300,000 export order for Tanel viewdata adapters from the Dutch micro systems house Cnnpur Communiqué Technologiques Industrielle. Deliveries of the first 700 will start at the end of this month, with the remainder of the total of 2,000 to be delivered within 12 months.

The adapters will be sold for use with the Dutch public viewdata service Viditel which is expanding rapidly with the help of a government subsidy of about £50 per adapter.

Tandata's former parent, Tangier Computer Systems, last month sold Tandata to Clyde Petroleum for £500,000, but the two will continue to be bound by exclusive contracts.

Clyde's backing will fund expanded production facilities and a number of development projects including a "viewphone" which will combine television, telephone and viewdata and will be able to handle a variety of national systems such as the Canadian Teldin viewdata system.

BASF signs first contract for Hitachi's number-cruncher

by Boris Sedacea

BASF to maintain its position in the market for plug-compatible mainframes, BASF has signed the first deal with Hitachi for a new technology processor, the M240H.

The machine is more powerful than IBM's 4341 Group 2, operating at 1.8 million instructions per second against IBM's 1.4 mips,

and uses 64K memory chips.

Hitachi is already selling the M240H in Japan with its own operating system, but BASF will sell the EGM version as the 765, IBM's own machine in that power range, codenamed Olympia 4, appears to have been delayed but is expected to be launched towards the end of the year for shipments

in late 1983, according to industry sources.

This would then be followed by an attached processor version with a multi-processing operating system, or with the Olympia 5 operating at three to four mips.

For BASF, the 765 is positioned between the 760, which

corresponds to the 4341 Group 1 running at 1.2 mips, and the 770 running at 2.5 mips and upwards.

The 770 is the same machine as the AS7000 from National Advanced Systems and uses ageing technology. NAS is expected to announce a replacement machine in about two months' time.

A four-colour screen, normally

provided as an add-on option on the 4341, is provided as standard on the 765, and all four block multiplexer channels operate at three Mbytes per second, which means that they can all accommodate data streaming storage devices and will accept all IBM disc drives including the new technology 3380.

The Complete Answer

'IBM to drop VM software as a migration tool' - Amdahl

by Boris Sedacca
IBM will drop its Virtual Machine (VM) environment as a migration tool, according to the predictions of its major plug-compatible competitor, Amdahl. As a result, users of IBM's large-scale 3801 processor may find migration from smaller machines more difficult in the future.

In the past, IBM has used VM as a strategic migration tool to allow users to upgrade from one machine to another, or to move to newer operating systems from those operating systems which were to be "stabilised" by IBM - in other words, they would no longer be supported with new facilities.

More recently, VM was given additional significance when IBM launched the second model in its top-end H-series, the 3081 Model K. Unlike its Model D predecessor, Model K was considered to be a true H-series machine with an "extended architecture", larger memory addressing facilities, and an operating system more attuned to multiprocessing than the standard Multiple Virtual Storage (MVS) used on the conventional System 370 architecture.

VM would allow migration from MVS to the new operating system which was also conveniently called MVS in order that users did not become too alarmed at the prospect of converting from one operating system to another. But according to John James,

regional support group manager for Amdahl UK, the VM interface on the 3081 will gradually be eroded. "It will not be needed within the interpretative machine environment on the 3081," he said.

James contended that the various operating systems now running concurrently on top of VM would eventually run directly on the hardware through the use of interpretative microcode.

James also predicted that the two major IBM time sharing operating systems, Time Sharing Option (TSO) and Conversational Monitor System (CMS), would converge into one piece of software. CMS makes more economical use of computing resources than TSO which is essentially an add-on option to the hatch-oriented MVS operating system.

However, CMS does not run realistically without VM. It was developed because IBM could not provide TSO on top of the smaller DOS operating system which IBM wanted to kill but which was given a new lease of life as DOS/VSE on the 4300 Series, announced in January 1979.

IBM would also be able to provide software subsystems for high-speed teleprocessing within the interpretative machine environment, James said.

Special purpose processors would be launched for front-end network management, back-end database management, and array processing.

JAMES... "VM interface on the 3081 will gradually be eroded."

More IBM compatible software
by Claire Goding
MORE help for IBM users in running their installations efficiently is on its way. In a drive to get its name and products better known to Europe and the UK, Software Module Marketing, a ready well-established in the field of IBM-compatible systems software in the US, is to sell and support products from Australia and Pittsburgh-based system house Duquesne.

Duquesne's products, which generally deal with the "mechanics" of running an IBM installation, were previously headed by peripherals manufacturer Memorex.

SMM's other find is the Australian-born JCL conversion tool JOL, from Clarke Computer Systems in Melbourne. JOL was previously handled by systems house SPL in the UK, and failed to make its mark partly because of installation and support difficulties.

SMM's choice of products which offer support and some thorough technical backup was a deliberate part of the firm's strategy to become better known in Europe. Its reputation is high in the US, but until recently it has made no great effort to promote its products here, largely because of support difficulties.

Nw that SMM has set up shop locally in Beckenham, Kent, as well as a similar sales and support operation in Germany, the main obstacle has been removed.

BT fibre cables record
by Donald Kennett
BRITISH Telecom's Marlow research laboratory has set a world record in optical fibre transmission by sending a 140-megabit-per-second digital signal down a 10-kilometre long cable with no repeaters in it.

Repeater spacings of 8km are being used in the optical fibre cables currently going into the ground. A dramatic increase to 100km spacing could change the way networks are configured and the economics of installing them.

The level of performance achieved has come by improving on work done in other parts of the world. The basic fibre-making process is a variation of the chemical vapour deposition technique invented by Corning Glass and improved by Bell Labs, both in the US.

One of BT's improvements overcomes the peak of moisture absorption that occurs when making fibre suitable for carrying 1.5-micrometre light waves. This wavelength has advantages for high-speed transmission over long distances, but the process used to prepare the fibre for this wavelength can easily make it cloudy. Current systems use shorter wavelengths.

COMPUTASTARS ENTRY FORM

We have read and accept the conditions of entry for the Computastars/Computastar 1982 and would like to enter

Main competition Men's teams Women's teams
Small units Men's teams
Veterans Men's teams
Computastar Men's teams Women's teams

Name of team(s)
Company
Address
Name of contact
Telephone Extension
Signature of DP manager or equivalent authority
Position held

We would like to compete in the following region:

NORTH (BARNSELY) MIDLANDS (BIRMINGHAM)
LONDON (ENFIELD) SOUTH (CRAWLEY)

Enclosed is £..... to cover the entry fees for the teams(s). Cheques should be made payable to Computastars Ltd.
In all matters relating to the rules or conditions of entry, the decision of the organisers is final.
Please send entry form and fees to Computastars, 117b High Street, Croydon CR0 1QG. Telephone 01-688 6696

Dates and venues: Crawley, Saturday, May 15. Enfield, Sunday, May 23. Barnsley, Sunday, June 13.
Birmingham, Saturday, June 26. UK finals: Birmingham, Saturday, July 24.
If you have a query on Computastars please don't contact us at Computer Weekly - get in touch with the organisers at 117b High Street, Croydon CR0 1QG. Tel.: 01-688 6696.

Varying degrees of skill are displayed at the water jump in last year's steepchase event at Cleckheaton.

Get into shape with the 1982 Computastars

DISCOURAGING news this week for the Computer Weekly Computastars team - despite our determined efforts, organiser Gordon Cairns has refused to give us a bye into the final.

So the CW training programme moves into top gear, and tonight's pounds just melt away as we punish our bodies mercilessly in an all-out effort to sweep all before us in the forthcoming competition. Believe you me, fighting the slab comes very hard indeed.

But your team's training can start with an even more energetic exercise - fill in the entry form and run, yes run, down to the post box with it. Really dedicated entrants can forget the stamp so they have to run back to the office, stick one on, and run back to the post box. It's not easy to be a superstar you know.

More training hints next week, but in the meantime, keep those entries coming in.

Sponsored by Computer Weekly

NEWS BRIEF 'Let BT raise capital'

FOLLOWING British Telecom's declaration of £140 million profits in the six months to last September, the Telecommunications Users Association has called for a package deal which would give BT the right to raise capital on the open market. In return BT would agree not to raise prices in the current year and to reinvest increases in inflation in the future.

Growing market

CII-Honeywell Bull has signed a series of new distribution agreements for its OEM products with Megavolt in Belgium, Adcom Data in Denmark, Autel in France, SKS in Germany and Digicom in Italy. The company now markets OEM products to eight European countries and in Canada.

Aussie project

ICL Australia has won a £1 million order from Logan City Council, Queensland, for a 2946 against competition from IBM, Wang, NCR and Honeywell. The project will be managed by ICL Facilities Management Services for five years. In Malaysia, ICL has taken orders valued at over £1.4 million to supply DR520, ME29 and 2900 systems for public and private sector customers, and has sold a £250,000 ME29 to the University of the West Indies to Trinidad.

Graphics split

UK COMPUTER graphics manufacturer Westward Micro Systems has split from Counting House, which marketed Westward's products, and formed its own inhouse marketing department to achieve a direct relationship with its customers. Westward, which has a new factory in Tewkesbury, Gloucestershire, has products designed to challenge Tektronix in the UK and European graphics market.

Following suit

ALFA Romeo has followed British Leyland and Opel to become the third car manufacturer to sign up for ADP Network Services' Onsite teleprocessing service. The service will be linked to an IBM mainframe at the company's headquarters near Milan and will be accessible from its offices in 300 cities in Europe and the US, for cash and investment management, as well as prices and technical information.

Design disciplines

A CAD/CAM database system which combines design disciplines for draughtsmen, designers and engineers has been developed by Calma, the UK subsidiary of United Telecommunications in the US. Using the Dimension III system, all the information for one project can be combined to facilitate production of such documents as bills of materials, weight calculations, cost estimates and finite element modelling.

Telecompromise

CABLE & Wireless is expected to announce today (Thursday) that it has accepted a compromise on international connections for its proposed alternative telecommunications network, Mercury. The licence from the government is to state that international connections will be allowed via circuits leased from British Telecom, rather than directly to overseas telephone companies as C&W would have liked.

Finance system

A FINANCIAL modelling system for the IBM System 34 has been released from PCR Inc, a US-based company which specialises in the IBM business market. The system is called Easyplan and is designed for end-users to do their own financial analysis for accounting, marketing, production, distribution and administrative activities.

Petrol stations go online to UK banks

by Donald Kennett
ELECTRONIC funds transfer has arrived in the UK. Britain's first online link between a point-of-sale terminal and a bank was opened in Aberdeen last week in a joint venture between BP Clydesdale Bank and Dunfermline-based terminal manufacturer Fortronic.

All three companies are sharing the costs of installing debit card terminals for a six-month trial in two Aberdeen garages that sell BP petrol. Like cash dispensers and bank counter terminals, debit card terminals debit the card-holder's current account directly, without the need for the invoice and remittance required by credit card systems.

This trial, called Counterplus, follows a trial last year in Norwich involving five oil companies, Barclays Bank and Fortronic, which used credit cards with electronic terminals.

BP's retail business manager Ian Ward said that the methods used in Norwich would not be continued.

And although the Aberdeen venture was also a trial, it was already planned to extend it as soon as enough experience was gained.

There were a number of differences between the two trials, Ward said. In Norwich, transaction details were stored at the point of sale and transferred to Barclaycard once a day and the cashier visually authenticated the customer signature.

The advantages claimed for Counterplus lay in BP research data which shows that only 11% of its customers like using credit cards to buy petrol. BP customers prefer to use cash or equivalents such as cheques and debit cards because they feel they can more easily keep regular expenditure within a weekly or monthly budget.

Holders of Access cards issued by the Midland Bank or its two subsidiaries, Clydesdale in Scotland and Northern Bank in Ireland will soon come into the system. This will involve agreeing transaction limits, issuing personal identification numbers to card holders and deciding how in allow Clydesdale to check cards without making unnecessary revelations.

Offering the service to holders of cards issued by other banks will depend on those banks providing reciprocal services from which Clydesdale's customers could benefit, or being prepared to pay for each transaction their customers make through Clydesdale.

It is planned to extend it to other retail businesses at the end of the trial. Supermarkets and jewellers are likely to be early participants. This will involve a large expansion of the bank's data network which currently consists of eight regional nodes based on Univac V77/800s with V77/200s as front-end communication processors.

Point-of-sale terminals in the shops will be linked by leased line to their local Clydesdale branch and into the network via branch controllers and modems from L100 Systems Developments, which are already in use with the terminals in the bank's 360 branches.

likely initial order would be for 250 units.

WARD... Debit cards are likely to be more popular than credit cards.

It is planned to extend it to other retail businesses at the end of the trial. Supermarkets and jewellers are likely to be early participants. This will involve a large expansion of the bank's data network which currently consists of eight regional nodes based on Univac V77/800s with V77/200s as front-end communication processors.

Zygal

The last word in new ideas presents the Digital personal computing option for the VT 100.

Zygal Dynamics, already one of this country's leading suppliers of office computer terminals, now presents possibly the world's most exciting personal computer package - the Digital CP/M.

The Digital CP/M personal computing option package includes CPU (Z80), Dual mini floppy drives, Diagnostic disc, User documentation and guide, Installation hardware.

It means that the VT 100, the world's most widely used professional ASCII video terminal, can be turned into your own desktop office computer in minutes. No sacrificing easy-to-read commercial quality video. And set-up functions you can personalize for yourself right from the keyboard.

Other features include: smooth split screen scrolling, double height double width characters, reverse video. It also features the decade's fastest-growing family of software - from high-level languages to everyday financial modelling, word processing, mail list, statistical packages and data base communications.

The Digital connection enables Zygal to offer a complete range of products for your every computing need.

Think Zygal for the Digital CP/M VT 100 personal computing option. Or any Digital terminal Think Zygal for all the leading names - Diablo, Fujitsu, General Electric. Zygal is the last word in new ideas.

Zygal Dynamics plc, Zygal House, Telford Road, Bicester OXON OX6 0XB. Tel: Bicester (08692) 3361. Telex: 837907.

BRITISH-MADE MICROCOMPUTERS AT THEIR BEST

TRIVECTOR COMMERCIAL LIMITED SUNDERLAND ROAD SANDY BEDS. TELEPHONE 0767 82222

The Interactive Office.

Our new word processor makes text composition and editing fast and simple. Because it is linked to the computer, it can also process data.

This manager's workstation gives business professionals easy access to the information they need for decision-making, without demanding an understanding of computers.

Our new high-performance HP 3000 Series 64 can handle 100 interactive users while processing big batch jobs like the company's payroll.

Our personal office computer, the HP 125, is specially designed to handle a manager's individual needs—including word processing, graphics, and data analysis. It communicates with big computers, too.

Economical computing with up to 56 terminals. That's what you get from the new HP 3000 Series 40. Use it as a central processor in a small office or as part of a network.

Graphics created on this low-cost terminal can be plotted on paper or transparencies.

High-quality printing for business correspondence and reports can be generated on this letter-quality printer.

Electronic mail and filing for individual users will be part of The Interactive Office later this year.

High-volume printing on this laser printing system virtually eliminates pre-printed forms, letterhead, stationery and long queues at the copier.

Data communications can expand The Interactive Office across the country or around the world.

Report generation is simplified by new software tools which let business professionals create reports and summaries in minutes without programming.

Hewlett-Packard announces a major contribution to productivity in the office. It allows you to integrate the four major resources your staff need to do their jobs faster and more effectively—document management, personal computing, support for decision making, and communications.

Based on the expanded family of HP 3000 computers, The Interactive Office brings powerful new word processing, data processing and business graphics capabilities to a wide range of users, including secretaries, managers, and other business professionals. Now, much needed power and vital information can be placed in the hands of all who need it—whether they work within the same office or on opposite sides of the world.

If you'd like to see The Interactive Office at work, call your local Hewlett-Packard sales office and we'll arrange a demonstration. You'll see what a difference it can make to your business today, and how it can grow to assure even greater productivity tomorrow.

For more information, send for our new brochure "The Interactive Office". Just post the coupon. Or simply call your local HP office.

Micros — 'for better or for worse'

ADVANCES in the microelectronics of weapons systems are making it extremely likely that there will be a global nuclear catastrophe within the next few years. But at the same time, computers are so enhancing the capabilities of non-nuclear defence systems that the very secure Europe which would result could be made completely nuclear-free.

RADA... Gloomy picture.

That was the message presented to the latest meeting of the Club of Rome by Frank Barnaby, former head of the Stockholm International Peace Research Institute. His grim warning was based on the fact that new nuclear missiles are so accurate that they can destroy the other side's weapons on the ground, thereby eliminating the balance of deterrence.

Barnaby offered instead the hope that European countries might switch to computer controlled "non-provocative defence systems" which would allow much of the nuclear arsenal to be dismantled. The Club was also warned that changes in technology were posing a serious threat to Third World economies, and that consequently a completely new approach to world development was required, based on self-reliance. This was needed to avoid

Salzburg, with Cathedral, seen from the castle.

"technological colonialism", in the words of Alexander King, chairman of the International Federation of Institutes of Advanced Studies.

The Club of Rome met in Salzburg to hear the results of a report on microelectronics and society, compiled with the support of the Volkswagen Foundation. The Club is a group of 100 distinguished international academics and researchers looking into world problems, and its best-known project to date has been the study entitled Limits to Growth.

The microelectronics report is called For Better or For Worse, and in addition to a summary of the technology it presents analyses of possible effects on macroeconomics, microeconomics, employment, job content, global interdependence, and war.

Barnaby's thesis of "non-provocative defence" claimed that with a country's borders ringed with sensors, remotely controlled vehicles, and satellite surveillance linked to a central computer system, and small mobile missile forces with very high fire power, the balance of power would be changed back completely to what it was in World War I, with defence being much more powerful than attack.

This would enable Europe to repel a conventional attack without the need for nuclear weapons, which could then be dispensed with. Otherwise a nuclear catastrophe brought about either by mistake or terrorist action was inevitable, he said.

Juan Rada, a Chilean working at the International Management Institute in Geneva, painted a gloomy picture of world-wide automated production eliminating the Third World's competitive advantage in labour costs.

Since the North-South dialogue was entirely based on the assumption of this advantage, the dialogue would soon founder completely, Rada said. In addition, the First World economic models being applied to the Third World were already obsolete — new ones were drastically needed.

Databases specifically compiled for developing countries were needed, he said, in areas such as traditional medicine.

Rada is already working to get IBM, Kuwait and Pakistan interested in a bibliographic database of Islamic science. This could even be of use in modern particle physics, faced as it is with problems that baffle traditional Western scientific method.

Complementarity between countries should be the key to a new approach to world development, Alexander King said.

King's own Federation is organising a meeting in the Ivory Coast in April to discuss specific problems and opportunities raised for Third World countries by technology.

the UK: inevitable mass unemployment from micros, is technology neutral, alienation by technology, society at the mercy of technology, riches for the few and poverty for the many.

Adam Schaff, the Polish philosopher and social scientist, claimed that a laissez-faire attitude to development could lead to "total destruction", while declining to say how.

From Germany, Wolfgang Mazurek proposed that technologists should swear a "Hippocratic oath" only to develop things that are to the benefit of mankind and not to its detriment.

The issue of whether technology was neutral had become a theological one, Alexander King pointed out, appropriately enough as it was in the presence of the Cardinal Archbishop of Vienna, and followed Adam Schaff's reference to an encyclical from his fellow countryman, the Pope. Entitled Laborem Exercens, this expresses concern on the issues and is being taken by Schaff as moral support.

Klaus Leink of the University of Oldenburg expressed concern about how technology could increase the power of bureaucracies, but he was sceptical of the ability of data protection legislation to do anything about this. On the contrary, he said, data protection could lead to a less open society.

The Club of Rome's founder, Italian industrialist Aurelio Pecorelli, stated the obvious when he said the meeting had not solved the question of whether microelectronics would be "for better or for worse", but he echoed the feelings of many participants when he warned that "we should look at the cultural effects of the technology", if we were not to "upset our inner balance" and "become ever more powerful barbarians."

A promising experiment was already under way in Venezuela, King reported, whereby farmers sent in weather data to a central computer and received back advice on when to sow, harvest, dry crops and the like. This could boost food production by 30%, he suggested.

Much of the Club of Rome meeting was taken up by rehashing of ideas long since done to death in

development, Alexander King said. It was essential that some countries should not end up as the sole providers of technology that others, lacking technical know-how, would only receive.

King's own Federation is organising a meeting in the Ivory Coast in April to discuss specific problems and opportunities raised for Third World countries by technology.

Much of the Club of Rome meeting was taken up by rehashing of ideas long since done to death in

From Moscow, German Gvishiani.

Concern for civil liberties

A NOTABLE participant in the Club of Rome meeting was Professor German Gvishiani, who is director of the All Union Research Institute of Systems Analysis in Moscow as well as head of the International Systems Analysis Institute in Vienna, and son-in-law of the late Premier Kossygin.

Whether micros turn out for better or for worse depends entirely on the choices people make, Gvishiani told the meeting.

The Soviet Union was very enthusiastic about the potential of micros to increase output, he said. And how could they turn out "for the worse" in Russia's planned economy where there need be no unemployment? "By increasing surveillance and control," he replied.

Danger of IT82 becoming Year of the Dog

I AM reliably informed by Chinese friends that 1982 is the Year of the Dog for them. We in the UK seem to have adopted the custom of relating to each year and relating to the more abstract virtues of a recurrent series of animals, but to current social issues such as the Year of the Child.

Information Technology Year might appear an odd choice after the Year of the Child and the Year of the Disabled - themes which were easily identified as being worthy human ones.

Presumably some Whitehall department has responsibility for identifying annual themes, and may even have a list taking us right up to the turn of the century. The choice this year could be said to be a bold departure, away from something that everyone could understand and support, to something that was incomprehensible to many, and controversial to others. I had been largely unaware of the details and aims of IT82 (as I shall call it for simplicity for the rest of this piece) until visiting "Which" computer show in Birmingham when I picked up a "glossy" explaining what it was all about.

On reading this pamphlet and other published information it became clear that the project was essentially a PR exercise, since the budget allocated for IT82 specifically was some £500,000. Further reading confirmed that the emphasis was mainly on informing and educating rather than actually doing.

The stated objective of the programme seems ambitious - aiming to increase the awareness of just about everyone in the community,

both the general public and the business sector.

Two basic questions arose in my mind:

1. Should we have an information technology year at all? and

2. Given that IT82 exists, will the message be spread too thinly to be effective, given the somewhat limited resources of the project?

Like others I have discussed this with, I was flattered that my own industry had been chosen - after all, we haven't had a Year of the Sheet Metal Industry or a Year of the Petroleum Products Processing Industry or anything like it before. Some would say that it is much belated recognition of an entirely new industry, pointing out that we could have done with it during the seminal years of the industry in the 1960s when British computer and related firms were trying to establish their positions in world markets against a background of indifference to and/or ignorance of the industry shown by the various governments of the day.

It is equivalent to roughly half a day's losses at British Steel

If the information "revolution" is likened to the industrial revolution then surely IT82 should be the equivalent of the Great Exhibition and other expositions much beloved by the Victorians which served both an educational role as well as being also a major show-piece for British products.

As for the second question, there is a danger of IT82 having

Norman Revell is a lecturer with the business systems analysis team at City University, London. He is a consultant with IBM and several other companies.

only a limited impact with the funds allocated - fair enough, you might say, after all it is partly taxpayers' money that is being spent. Put in context, though, it is equivalent to roughly half a day's losses at British Steel - also taxpayers' money!

Admittedly there are other public financed projects such as the schools project which are associated with IT82, but they were on the drawing board longer, and their impact is either longer term or more limited in scope.

To be effective I believe IT82 needs a lot of "free" help and goodwill from everyone within the industry, and indeed the organisers make a plea for help on the back of their explanatory leaflets. Without this help IT82 is in danger of becoming a non-event.

Finally let us hope that a successful IT82 doesn't result in extensive overtime being worked in Japan, otherwise it really will be the "Year of the Dog".

Useful address: If you would like to help, 1. Mr. Kenneth R. Barnes, project director, Information Technology Year, 19 East Row, London WC1R 4EJ. 2. DoI, Information Technology Division, Dean Bradley House, 31 Horseferry Road, London SW1P 1AG.

How to succeed - a guide for the insecure DP manager

YET again, it seems the DP manager is being warned to pay more attention to company affairs and less to computer industry technology affairs. The political climate in board rooms and management offices should be the stalking ground, rather than the DP marketplace.

This message will hardly come as a surprise to many DPMs who have realised that the company grapevine communication system is of more value than a string of datacom channels. Meeting the company chairman at the local golf club often has more impact on DPM career fortunes than meeting application and workload deadlines.

The new US report How to Succeed, states that of all managers the DP variety is at most risk. Statistics show that DP managers lose or change jobs every two-and-a-half years on average. Given this level of job vulnerability, the DPM heading towards the old slopes at Aviemore or Vail, Colorado, may wonder whether the skids will firm under him on his return to firm installation base.

Ranged against the DPM are not only the odds of computer technology performing according to plan, but company management envious of the power of the DPM, his prestige, budget and possibly age group.

The vulnerable hit-list is not, however, limited to the DPM. The data centre itself is threatened with heavy doses of computer crime, computer abuse and fraud. Computer security could become the major theme of the year - that is if it can get a look-in between the massive coverage and promotion being devoted to IT Year events.

Combating potential computer threats is well on the way to becoming a growth industry, especially as there is now a possibility of government legislation. Being Prepared is a slogan which serves

the DPM well, whether it is an emergency list of phone numbers, a list of excuses for non-delivery of work-schedules, back-up procedures or reserve supplies of late-night snacks.

The DPM should therefore give as much time and attention to protecting his installation as to protecting the job. The world of computer security covers all activities, ranging from team monitoring and motivation, data input and output procedures and such basic security policies as the introduction of installation door locks, passwords and user system entry validation.

One way of responding to the challenge could be by attending an industry-based forum in March called Computer Audit Control and Security. Among the computing bodies supporting the venture are the IDPM, NCC and BCS, which certainly grants an industry seal of approval to the organiser, the Institute of Internal Auditors.

Among the noted speakers are representatives of the government, banks and audit companies. Just about the only security and audit topics not covered in the course of

the three-day sessions would be to costs - an unfortunate omission for the practical DP manager who may well be hounded by the possibility of incorporating security procedures.

The days when installation security is limited to securing operators do not still exist. On the CPU, that is, the computer room door and that the security of installation calendar Snoopy cartoons produce kept to a reasonable quota, be numbered.

First on the installation list should be the unauthorised access of company executives, but around the company computer works. Next is a series of computer appreciation courses for the company auditing and accounting team, especially the system has moved on to generations from punch card operations.

Meanwhile, the first one which offers advice on how to expect a sell-out on any day.

Alan Simpson

10 YEARS AGO

From Computer Weekly of February 17, 1972

A REPORT by the Department of Health and Social Security and management consultant McKinsey said that the National Health Service had the chance to lead the world in the use of computers to improve health services - all that was needed was "concerted and effective developments".

Most computers users interviewed by Computer Weekly showed confidence that they would cope with the forthcoming wave of power cuts. The BBC added a second ICL 1904A worth about £500,000 to its Sulgrave House computer centre in London. The Post Office and

Privacy shock

IT has been a busy time on the privacy scene. Following trumpeting in the Sun about disclosures of an MP's private data, Home Office minister Timothy Raison announced some radical changes to the government's approach. He indicated no less commitment to the idea of data protection but raised many questions about the efficacy of controls.

The news from the Sun was exceedingly stale. It revealed that it is possible to bribe police and government officers to part with information. The claim that the Prime Minister was provoked into action by the story is equally deluded. She said what she has said all along: that legislation might be introduced in the next session of Parliament, that is, possibly a year from now.

Hardly a lightning response. What is far more important is the lack of any word from her about action that she could take here and now, namely, tightening up the security of public sector files by executive order.

The disclosures about Mr Michael Meacher which provoked Mrs Thatcher's "distaste" basically come from government files. Ministers need no legislation to direct their officials to implement adequate security systems. In fact, they should be doing so already. Either the PM is genuinely not conscious of this or she is hiding behind the legislative process as an excuse for procrastination.

Of course, it remains an open question as to how controls, whether legislative or administrative, could effectively obstruct officials who are prepared to be bought. As Chief Constable Philip Knights has said, "there will always be the bent copper," and a system from which there can be no leak would probably be unusable for its purpose. Nevertheless, there are security measures that could be taken, such as tracing systems, that record every access to every piece of information for a certain period of time.

These need to be considered urgently, and as the government itself seems uninterested in the subject, a special security commission for public sector files could well be set up to look into the question in detail.

□ □ □ □

Raison's remarks were of much greater moment than the stories in the Press. He delivered to our industry a major bombshell in the form of the government's conclusion that different codes of practice for system operators would be impracticable. His reasons were that it would be too often unclear what code of practice should apply to what case, and within each category there would be too many variations to make a single code workable. He added that formulating the codes and keeping them up-to-date with changes in technology would be expensive and time-consuming.

Certainly, doubts have often been voiced hitherto about the difficulty of sorting out overlapping codes, especially when a breach of a code can constitute an offence. Nevertheless, the idea of codes has become so firmly established that many of those involved must feel now that they are being sent back to square one. The National Computing Centre has spent a great deal of time formulating draft codes and trying to decide whether they are practicable. The rethinking that is now going to be necessary causes yet more delay to the eventual realisation of UK data protection.

Raison's vision of how the system would work without codes is woolly. He says that all operators would be obliged to respect the Younger Report principles on relevance, accuracy, security and the like, which would be enshrined in a Data Protection Act. But what about such issues as subject access to data, i.e. the right to see one's own file, which most people agree is appropriate in some cases and not in others? In the absence of codes of practice, system operators will be in the dark.

One delicate note came out of Raison's talk that is guaranteed to disturb the civil liberties lobby: he suggests that certain categories of files, such as those to do with law enforcement and security, should be exempted from registration altogether. Thus not only would there be no subject access but the public would not even know the files existed. In that case, if the registrar can do nothing about such files there is no need to bother with making him independent!

1984 and all that . . .

THIS week's example of the strange things people say about computers was sent in by P. J. Morley of Sheffield, who wins £5. Being a 76-megabyte computer, it can spew out its contents in any one of dozens of different sorts of order. It can tell you which habitats are open to what threats or what threatened species occur in what countries; it could probably tell you the middle name of the prime minister who is doing least world-wide for his plant life.

Radio Times

LETTERS

Few competitors

THERE is an excellent reason for the "low market penetration" by competitors to ICL's TPO and TPMS monitors for VME/B users brought to our attention by Mr Bryan Parlett (Letters, February 4). As far as we at this company are aware, no-one has yet produced a competitive product.

ICL does not offer end user support for the low-level interfaces used by TPO and TPMS, so that any competitive product would be very seriously at risk from possible ICL software upgrades. Customers would then be forced to stay with obsolete, possibly unsupported operating systems until their teleprocessing monitor supplier was able to catch up.

In any case, as Mr Parlett points out, ICL's monitors are really quite good and in our opinion try to better them at what they are trying to do would be a futile exercise.

The companies with an investment in TP monitors for ICL's 1900 series architecture are naturally interested in the upgrade market and of two known competitors, one has already announced a product which will enable users to change over with a minimum of recompilation, etc. Since all the

monitoring, routing and recovery facilities are already provided by ICL, the VME version of this product reflects its status as a mere conversion aid by sporting a price tag considerably less than that for the original 1900 series version.

The other company has, we believe, a product which will be released imminently and we await its announcement with bated breath.

Although we agree in the main with Mr Parlett's conclusions, and in particular with his support for ICL's VME/B, we believe that a VME/B TP system requires a great deal of careful planning if the TP environment is to be soundly constructed and if it is to be easily extended and enhanced.

We believe that our product, Gresham TP2900, is the only one addressing this area of applications supportive software, and the interest being shown in the product by a wide range of users, some of whom are claiming 40% savings in development costs, seems to imply that TPO/TPMS is not the complete answer to simple TP systems however effective it may be when properly implemented.

No rubbish for unions

YOUR short article in the Lamsac Refuse Collection Computer Model has just been brought to my attention (Downtime, January 21).

I am surprised that you can make these comments as there is no way that any reading of published Lamsac literature on the Ross Model could justify the interpretation you make. If you are quoting from any other document then both you and this other unacknowledged source are incorrect.

Certainly, using Ross, the trade unions (as well as management) do receive detailed printouts of all the data used in the computer process, whether this data refers to premises or to times. This reflects a commitment on the part of Lamsac to ensure that all background information required during the consultation/negotiation processes is openly available.

Certainly, also, there is a version of Ross, called Ross Audit, which is available to enable authorities to

obtain - without any survey work - an estimate on the effectiveness of their refuse collection service. But this simplified version is simplified only to the extent that it accepts estimated figures on some factors rather than definitive data derived from a survey "on the ground" in an authority.

Any suggestion that Ross Audit was designed and made available because of difficulties of comprehension by anyone or that this Audit model uses a different set of routines for the calculation of workload is totally false and I ask that you publish this letter to put right any incorrect impressions.

May I say, however, that I hope Downtime will continue to take a necessarily irreverent look at the computer world, but that this examination should in future remain within limits of accuracy.

S. R. BARNES

London SE1.

Replacing 160-col printers

I WOULD like to know whether other ICL users have problems arising from the plan to phase out printers with 160 printing positions and if so, whether they have found a suitable solution.

With 160 pp printers printing can be speeded up by printing forms two up in situations where 132 pp printers could not cope. As a result we now have a large number of programs using stationery which would not suit 132 pp printers.

To redesign and re-program is a very large task and will result in slower printing. I believe that some organisations with large print outputs use offline printers which will continue to be available with 160 pp. This option, however, seems much less suitable for the smaller user who would have to purchase at least one online printer in addition to offline printers.

DOWNTIME

When violence to the system is justified

COMPUTERS are having profound psychological effects on people who work on them, says Sanford Weiner, a professor at St Joseph's University, Philadelphia.

Some, he says, get hooked on computers and become cyberphiliacs. We all know about the programmer who cannot stop fiddling with the keys of his VDU.

Others develop a fear of computers and become cyberphobics. These unfortunate souls develop symptoms akin to those of other phobias like claustrophobia, such as nausea and high blood pressure. Some cyberphobics simply change jobs, but when computing is their livelihood, they cannot do this. They may then turn to violence.

There was a sad case in West Germany recently of a 29-year-old insurance salesman who attacked

the computer he was working on with a chair. The computer had broken down five times on one day.

But even Chind thinks he went a bit far when he finally set fire to the computer in a fit of fury after having smashed its bytes to bits.

Still, never mind. The man was acquitted, the judge decreeing that his patience had been tested beyond all reasonable bounds.

It clearly had. But was his limit of patience a normal one? If I had a pound in the bank for every time a computer has crashed on me five times in one day, my name would not be Chind.

An interesting test case, though, if only the value judgment could be applied to dealing with people. I would have an iron curtain defence next time I take the stick to my wife.

Time sharing in a very friendly environment

THERE is a very friendly environment for time sharing in a very friendly environment. It is a friendly environment for time sharing in a very friendly environment.

It is a friendly environment for time sharing in a very friendly environment. It is a friendly environment for time sharing in a very friendly environment.

It is a friendly environment for time sharing in a very friendly environment. It is a friendly environment for time sharing in a very friendly environment.

The people robots cannot replace

A SLENDER flexible robot that will probe inside people's bodies to perform delicate surgery is in the pipeline from Japan. On so I read recently.

And the claim somewhat more convincing. No doubt a Japanese robot of technology is the way to help surgeons. But what if they either cannot see, or when they are the most delicate for their delicate delicate delicate.

Not to sound too much like a robot, but we have something to replace the surgeon. It is not to be taken seriously.

I prefer another recent piece of Japanese news which tells of robots writing 'Happy Birthday' with icing on sponge cakes.

Computers can't win!

COMPUTERS fall between two stools of public opinion: some believe they never make a mistake, while others hold them responsible for all hiccups.

This dichotomy is nicely illustrated by two quotes from BBC sports programmes:

1. David Vine commenting on the World Ski Championships: "This man Stenmark has a high like a computer - he never makes a mistake."

2. The following night, the Week's commentary on the European skating championships in Lyon: "Due to the error of the computer the Manchester computer Barker and Slater have moved from fourth to fifth place."

Sporting chance

MUCH against my better judgment, I find myself a member of the Computer Weekly.

Competing in this year's Computer Weekly. My main contribution to the team's undoubted success is the arduous and vital task of selecting a suitable name for our gallant competitors.

Early titles rejected included "The Superhack" (too quiet), "Computer Weekly" (too near the physical truth), "Buckton" (too inflexible), and "Nottingham Forest FC" (already in use). What I am really looking for is a punchy brace of words containing the message "A team of over-confident, out-of-condition, secondary workers who believe they can overcome the cream of Europe's computer industry."

One step nearer to a non-stop system with inbuilt resilience

SINCE the siege of Troy, man and woman has dreamed of making a perpetual motion machine. Such a dream is now known to be of the piped variety, and more recently the same humankind has indulged itself in a new fantasy: the fail-safe computer.

Of course there is no such thing. Until 1976 nobody had even tried to make one. Then came along a company called Tandem with its now world-renowned NonStop system. This was launched in 1976, and for four years it ran the market unopposed.

The Tandem approach involves duplicated but closely coupled hardware, based on a common set of interfaces. Its NonStop processors are 16-bit minis simulated by 32-bit BCL microcomputers.

Tandem would never claim its NonStop to be immune to failure. But it has established a reputation for reliability and eliminated a number of common hardware failures.

Other companies have brought out multiprocessing systems for extra number crunch, but without resilience. Indeed, Digital Equipment Corp has just announced what it calls an asymmetric multiprocessor system constructed from two VAX 11/780s closely coupled with shared operating system. But again, this is not a resilient system.

The first UK company and second in the world really to tread on Tandem's toes is Combined Technology Ltd, CTL, based in Hemel Hempstead, which released its resilient system based on the Series 8000 computers in December 1980.

The approach is somewhat different from Tandem's. Firstly CTL has made it easy for existing Series 8000 users to buy resilience without changing any software.

Resilience can be had in stages, whereas with Tandem or DEC, it is all or nothing.

CTL usually calls its system Momentum, but sometimes refers to it in passing as a nonstop system. The spelling of the word onanop is significant. Tandem calls its system NonStop — a proper noun with a capital S in the

middle. But two such common words as "non" and "stop" cannot be concatenated and reserved as a trade name, so CTL is quite at liberty to describe its system as nonstop too.

But why not be different? The answer is that CTL has no desire to set itself aside from Tandem. In this age of lookalikes, there is instead some desire to climb on Tandem's back and look over its shoulder.

This, CTL has already done with the development of the Momentum system and there is no attempt to hide that fact.

"We will be delighted if we do half as well as they do," admits CTL's head of product development Chris Pick. There is so Tandem-knocking at CTL.

CTL does, however, claim to offer greater resilience than Tandem in the case of system software failure. "This type of failure occurs more often than hardware failure," says Pick, claiming that Momentum's fast recovery software will often overcome a system failure.

"Recovery time is typically two or three minutes," he says.

But Tandem's NonStop system may be more reliable in the event of hardware component failures, he concedes.

CTL offers resilience in three stages. The first is the fast recovery option capable of returning a

PICK... Extra hardware to minimise failure causes more failures through breakdown on communication.

database to a clean and consistent state. This will retry a failed program several times before either skipping, if this is feasible, or aborting the whole run.

The second phase is a mirror disc option "to avoid the catastrophic disc failure nightmare", in the words of products marketing manager Tony Smith.

Full resilience is achieved by linking two processors on different power supplies. There is just one link joining the two processors. But shouldn't there be two, in this world of symmetry espoused by Tandem and CTL?

"No, because we might as well treat link failure as a single system failure," says Pick.

"If it fails, computing power is halved, just as if one of the processors had failed."

CTL did consider having two links, but dismissed the idea as not worthwhile. "The link is very reliable and unlikely to fail anyway," says Pick.

Sometimes extra hardware to minimise failure actually causes more failures through breakdown of communication," he says. Surely not a little dig at Tandem's duplicated hardware?

Momentum has two processors linked together, but each processor runs programs independently

of the other during normal usage. In fact, the user sitting at a terminal will usually be unaware which processor his or her program is running on.

The two processors therefore access the same discs so that after a failure, there is just one processor running as in a normal system.

When in full flight, there is almost twice as much processing power available as when just one Series 8000 computer is being used.

Almost, but not quite. One does not get anything for nothing, and software associated with the link to handle failure of one or other processor inevitably takes its toll.

The link passes information between the machines on locking and unlocking of discs, which is necessary when the two processors want simultaneous access to one disc.

This exchange posed an interesting little problem to the CTL programmers when writing the software for the fast recovery option. The solution is simple, yet the problem had one of CTL's analysts sweating for weeks.

The problem arises when a record is updated twice in quick succession by two different programs. When a crash occurs, the recovery system has to know

what state this record is in for the database to be placed in a condition from which a restart can be made.

To do this, a program has a checkpoint. If a crash occurs before the checkpoint is reached, the record is returned to the state it was in before the program did any update. But if the checkpoint is passed, the record is kept in its new updated state, so the program will not have to be rerun after recovery.

A problem arises when one program has updated the record, but is still running and not yet checked out, and then the second program updates the record and completes its check-out.

Naturally the system would return the record to the state before the first program got its hands on it. But the second program has meanwhile updated the record and checked out, so there is no memory of what state the record was in when the second program accessed it.

This contradiction was simply resolved by keeping the record locked until the first program had checked out. Then there is always only one program's updates to consider when a crash occurs.

Another problem is that of having one system take over from another when a crash occurs. Here full automation has not been achieved, and when one processor fails, the operator can decide whether to slow all users a reduced service, or offer high priority users a full service.

The link at present merely indicates which system is talking, and CTL expects to incorporate a second link between processors in future systems to give fully automated resilience.

When this skeletal division-sum problem was first published, in 1906, the author W. Barwick gave only seven of the 7s as clues. The retro-analysis called for was quite substantial, so I have lightened the burden somewhat by inserting all thirteen 7s, which occur. See page 32 for the complete sum.

'Trespassers' enjoy breaching security

WHEN a former colleague of mine was sacked from his analyst job at an ailing software house, malicious gossip would have it that he was guilty of industrial espionage. He had been caught several times in the smallest hours of the morning with his nose deep into personnel files, and after a couple of warnings he was told to go.

Management was glad to be shot of a man whose work had been a cause of concern for some time anyway. He was one of a not uncommon breed which can sound off with great authority about anything under the sun, but never seems to get anything done.

Nevertheless it was, I think, hyperbole to accuse of espionage a man who simply possessed an insatiable lust for information on other people's private affairs.

As another colleague put it: "He just loved to breach security. Such cases are by no means uncommon in the IT/S where most

variations from the accepted norm of behaviour first win official recognition."

An article in the Canadian Gazette quotes Donn Parker, an author and computer crimes specialist at the Stanford Research Institute in California, as saying that computer pranking is part of a serious international problem.

These people are technological trespassers, he says. "They often do it just for the sheer joy of destruction."

He was referring in particular to three men who, when charged with rummaging through confidential computer records containing information that could lead to devastation of a telephone company's computer system, said they were just doing it for kicks.

The article draws attention to the ease of entry into some systems by simply guessing at passwords and codes. Companies, it seems, display limited imagination when it comes to designing them.

OP SPOT

How safe is your fire safe?

IT'S all very well spending thousands of pounds on protecting your hardware from fires or other disasters, and arranging sophisticated standby plans with other installations, but without safeguarding the most precious resource, the actual data, you are wasting your money.

In an ideal world, the best way to achieve data resilience would be to store copies of all company-critical files in a secure environment several miles away from the installation.

While this service is offered by third-party companies (at a cost), it suffers the drawback of the amount of time it takes to recover a tape or disc from the secure store in the event of the original failing.

Taking a third copy of the file, to be kept on-site, is one way out, but if a large number of files is involved, the cost in media and space to store them may prove prohibitive.

Probably the best, and most common, compromise is to install fire-resistant safes on-site. The copies are secure from damage, yet instantly available if required.

There are many different types of data safe on the market, and, superficially, they all appear similar. So how do you know which is best?

One manufacturer, who shall remain anonymous, sells a document safe at a price of £750, on which he is making a profit. By installing a laminated wood liner costing £50-£75, he markets it as a "fire safe" (my quotes) at £1,300.

Whether this is either a suitable method of construction, or a fair profit margin, I leave to your judgment to decide.

In West Germany, Switzerland and Sweden, there are stringent tests for fire-resistant cabinets. The UK had a test until 1980, when it was suddenly withdrawn.

The British test was carried out by the Fire Office's Committee (FOC), and was the most severe of any of the European standards. The severity of the test is illustrated by the fact that in the eight years the test was in existence, only one manufacturer's safe actually passed.

In West Germany, every model of safe offered for sale must carry a VDMA approved sticker. Every cabinet marketed as a fire safe must have been subjected to fire testing, and the VDMA can take any production model for examination to ensure that the safes on the market are built to the same specifications as the one originally tested.

Should a production safe fail the test, approval is withdrawn from all safes of the same model.

Thus the manufacturers are encouraged to maintain standards, and the customers are assured of protection. Without such spot checks, the manufacturer can build production safes, which bear a superficial resemblance to the prototype, out of inflammable materials if he should so desire.

How are the tests carried out? Most fires can be described as causing a fast increase in temperature followed by a slow fall, reflecting what happens as a fire is brought under control, but the building still retains heat.

The fire safe could well sit in the remains of the building for several days, waiting to be dug out.

Thus it is important to simulate this "soak" period by hosing down the red-hot safe with high-pressure water jets, and dropping it to create the effect of a building falling on it.

The FOC 2½-hour test was based on the official European test as defined by Comité Européen des Assurances (CEA):

1. The safe under test is placed in a furnace and heated in accordance with the standard time/temperature curve for a period of 90 minutes, by which time the temperature will have reached 1,000 degrees Centigrade;
2. The temperature is then progressively reduced to 500 degrees C. Having been under heat for 2½ hours, the cabinet is left in the furnace until the internal temperature of the safe begins to drop showing that the maximum temperature has been passed;
3. The internal temperature must not at any time exceed 65 degrees C, and the humidity level must remain below 85%. Data recorded on magnetic media inside the safe must be proved to be usable.

The drop test is carried out as follows:
1. The cabinet is heated for 1½ hours, and then dropped four metres onto its most vulnerable point, the front edge, while it is still hot;

2. It is replaced in the furnace for 30 minutes, and doused with cold water under pressure. The magnetic media must still be readable.

It is unlikely that any fire safe should be subjected to a more stringent test, but most manufacturers who carry out their own tests limit them to one hour. It is

significant that in this period, the maximum temperature reached by the furnace cannot be higher than 925 degrees C.

Those manufacturers conducting their own tests can, and usually do, see how long the temperature and humidity remain below the accepted limits, and then cut off the graph just before these parameters increase beyond them.

This rise is usually carried out to give the impression that a safe with a one-hour rating is suitable for two or more hours. Beware of time temperature graphs which show no downward trend before the time axis stops — these safes are adequate for the time shown on the graph, but you must rush into the blazing building and remove the media before the internal environment degenerates to the point of destroying the data.

The time temperature curve must show a definite downward trend, not just a levelling off. As an example, one safe was tested, giving internal readings of 61 degrees and 78% humidity after one hour under test. But after a 60-minute "cooling" period, these had increased to 68 degrees and 90% humidity — well outside the limits.

The manufacturer's literature only showed the graph up to the point where temperature and humidity increased beyond the limits. Is this to be construed as deliberately misleading, or as a genuine oversight?

So why did the FOC withdraw the test in 1980? The main reason given was that there were "serious reservations" because of the "unacceptable variations" that could take place between different test sites.

Hugh Johnson, product manager of Rosenburgs, the only company to have a fire safe pass the FOC test, thinks that the prospective buyer of a fire safe is at risk, because there is no effective control on the manufacturers of fire-resistant cabinets.

Johnson says: "Surely an official test for fire safes, even one with variations between the various testing sites, is more desirable from the user's point of view than no test at all?"

Why is it that West Germany, Switzerland and Sweden all consider it necessary to have their own standards, and Britain, which once had the most stringent testing in the EEC, now has none?

JOHNSON... "Surely a test with variations is better than none at all?"

SOFTWARE MONTH COMPUTER WEEKLY'S SOFTWARE SUPPLEMENT

Computer Weekly was the first general computer journal to give software its own space when Software File was introduced for weekly news reports. Now the time has come to expand the coverage further.

Edited by our Software Editor Claire Gooding, Software Month will devote its whole coverage to one subject each month. The topics are listed below. But including each month will be a news round-up, highlighting important events of the past month, and a column by consultant David Ferris on the increasingly important business side of software and the companies which market it.

PROGRAMME FOR 1982

- February 25: Annual software review
- March 18: Networking software
- April 22: Database
- May 13: Financial and project planning
- June 10: DEC systems
- July 15: Payroll packages
- August 12: Integrated Office software
- September 8: Program productivity — program generators and high-level languages
- October 7: Word processing
- November 4: City software
- December 2: CAD/CAM and scientific software

For advertising within Software Month contact Gordon Bradley, 01-681 8800 ext 3672.

FOR THOSE INTERESTED IN COMPUTING IN MEDICINE

Second cardiological data processing symposium May 18th-20th, 1982, Harrogate, UK

Topics include Office Technology, Database Management, ECG Processing, Image Processing, Ultrasound Analysis, Real Time Signal Processing, etc.

VT 100 GRAPHICS DISPLAY

Now available with plain paper graphics print feature

- Full graphics capability
- Tektronix software compatible
- Cross hair cursor
- Green raster alpha display
- High resolution window
- Light pen option
- Retains VT100 features
- Supports graphics packages

In stock now!
Prices are single unit quantity. Ex VAT.

PEOPLE

Peachtree names managing director

NEWLY-FORMED Peachtree Software International, part of MSA, has named a new managing director. John Hale joined MSA in 1978 as managing director and founder of the UK subsidiary. He left a year later to form his own company, Hale Computer Services, to develop and market software for minicomputers.

Before joining MSA, Hale was UK general manager of Cincom, a

post he held for five years. His computing career started in 1962 when he joined ICT (later ICL) in a customer support role. By the time he left in 1969 he was technical manager of ICL's Far East marketing division in Singapore and Hong Kong.

Between 1969 and 1973, when he joined Cincom, Hale worked in DP management in Germany and Switzerland.

Three join the board

COUNTING HOUSE Computer Systems, part of the Cope Allman Group, has promoted three senior executives to the board. This follows the appointment last year of Bob Whitfield as managing director.

Joining the board are Ken Davies, Roger Staines and Graham Townsend. Davies joined Counting House as product manager, technical systems, last year, after five years with Kongsberg Data Systems.

Staines joined the company as commercial applications manager in 1981. He had previously worked for Ford Motor Company for 11 years.

Townsend is the company's financial controller. He went to Counting House last year after two years as financial controller of the Yellow Pages activities of Thomson Directories.

Bob Pennington, Neil Spalding, Stephen Jones and Mark Roberts are all newcomers to Maidenhead-based Micro Scope. Pennington, formerly a design programmer with Whitbread, becomes a project leader. Spalding joins as a senior analyst programmer, having worked as a programmer with LCA Computer Services, and Jones, also a former LCA programmer, becomes a programmer for Micro Scope. Roberts has been appointed firmware designer and programmer and was formerly a programmer with A-Z Computer Services.

Robio Allsop has joined Sony's communications systems division as product manager for word processors. He was previously with Wordplex, where he was systems support manager. Richard Holt, formerly viewdata sales and marketing manager with STC, joins Sony as product manager for viewdata. Mohsen Noohi has been appointed assistant product manager with responsibility for dictation machines. He joined the company in 1979 as a trainee.

Charles Chang has left ICL to join Butler Cox and Partners as a senior consultant. His career in the computer industry started in 1964 when he joined IBM in New York. For the past 11 years he has been with ICL, which he joined to manage its System-4 DBMS project in London, in a series of posts.

Eric Morgan has transferred from ICL to Baric Computing Services as national sales manager. He has been with the ICL group for 28 years. He joined in sales support, subsequently becoming support manager. From 1961 he held various sales managerial positions, latterly sales manager for Southern England.

Dave Patrick has joined Newbury Laboratories' newly-formed micro systems division as marketing support specialist. He previously held a similar position with Telecomputing. Patrick joins the team responsible for micro systems, software and engineering support, provided through five service centres in the UK.

Boss for Verbatim Ireland

PATRICK ALLEN is to replace Greg Lynch as managing director of Verbatim Ireland. Lynch set up the Verbatim plant in Limerick three years ago.

Allen joined Verbatim in Sunnyvale, California, in 1979 as product line operations manager.

In 1968 he joined NCR in Dundee as systems engineer, where he became European hardware specialist based in Brussels. In 1973 he returned to Ireland to become operations manager for Mesurex Ireland.

Two years later he moved to Measurex Corp in Cupertino, California, as corporate quality assurance manager. In 1977 he went to Intel as quality assurance manager.

Martin Fraeels has been appointed director of UK and Northern European operations at LTX. He was previously with ICL for 15 years where he held senior management positions in the sales and manufacturing groups. Iain Woolley has been appointed customer service director at the company. He spent a long period with ICL, serving most recently as customer service manager in Malaysia.

Margaret King has won Tangent Computer Services' award for outstanding effort in achieving sales revenues of £500,000 during 1980/81.

Chris Gent has been appointed product marketing manager at Baric Computing Services. He has

previously held positions in customer service operations and marketing in the services industry.

Gillian Furniss has been appointed senior support analyst at Prime's Feltham office. She was previously with ICL for two years, working on the development of small systems. Also joining the company as a senior support analyst is Julian Borys, who will be based at Prime's City of London office. He was formerly with Omnidata as software support programmer.

Alan Oppgaard has been appointed senior sales executive to cover the Scottish market for Gould SAL Computer Systems division. He was formerly a sales engineer with Hewlett-Packard.

Robert Fiaher has been appointed dealer sales manager for Peachtree Software International. He was previously technical support manager for MSA, which he joined in 1978.

Mark Whittle has been appointed financial controller at Megabyte, the Leeds-based turnkey computer systems supplier. He was previously a management accountant at Shepherd Engineering Services.

Brian Bayham has been appointed senior sales executive for Army sales at Ferranti Computer Systems. He spent 32 years in the Army, retiring as a lieutenant-colonel. Before joining Ferranti he worked as military sales manager at Marconi Avionics.

MD for AES Euro base

DAISY Systems Holland, subsidiary of AES Data, has appointed a new managing director. He is Jao Cornelisse, former managing director of Prime Computer Benelux BV.

Daisy Systems Holland is an OEM supplier of printer products. It was acquired by AES Data in June last year, and is AES' first hardware manufacturing base in Europe.

Keith Baker has joined Rediffusion Computers as a systems analyst. He was previously with Prime Computer as a systems engineer.

CONFERENCES

THE UK APL User Group is set to meet on March 19 at the Reed Lecture Theatre, Imperial College of Science and Technology, in South Kensington, London. Theme of the meeting is 'Flavours of APL', and it will look at differences in environment provided by APL suppliers, particularly in terms of file systems. These differences, says the group, are many and great. They include IBM VS/APL, ICL/APL, etc. users may have difficulty communicating with one another. Organiser is Tony Moore, who can be contacted on Waltham Cross 32222, ext 3488.

THE seventh International ALLC (Association for Literary and Linguistic Computing) Symposium on Computers in Literary and Linguistic Research will be held in Pisa, Italy from June 7-11. Themes are theories, methods, problems and applications of literary and linguistic computing. Panel discussions and workshops will be held and papers are expected to include lexical databases and computational techniques, software and hardware for literary and linguistic computing, and semantic analysis and natural language processing. Details from Prof Antonio Zampolli, VIIALLC Symposium Istituto di Linguistica Computazionale del CNR, Via della Faggiola, 32, 56100 Pisa, Italy. Tel: (050) 502082.

THE fourth annual computer education open day, Computex, takes place on April 2 at the Central Library, High Street, Bromley, Kent. Doors open at 10.30. Main exhibitors will be representatives of the pupils and staff of Bromley's 25 secondary schools. The exhibition is seen as an opportunity for the schools to demonstrate their continued progress in computer education and computer assisted learning. Themes are computers in primary education, business studies and remedial education. During the open day prizes will be presented to the winners of the Bromley schools computer competition.

Details from Mrs J. Buckley, Ravens Wood School, Bromley, Tel: Farnborough 56050.

EFFECTIVE COMMUNICATIONS ARE VITAL...

Effective communications are vital to the efficiency of every organisation. The easiest way to see and compare the whole range of electronic communications systems is to visit Communications 82, the world's leading international exposition of communications equipment, exhibition and conference, plus a programme of social events with guest speakers of international stature.

Communications 82 will be of direct interest to all communications users as it crosses the boundaries between civil and military, public and private, industry and commerce, fixed and mobile, in the same way as do the technologies involved.

So whatever you need - however specialist - you'll find the latest equipment at Communications 82, ranging from the simplest mobile radio equipment to tropospheric scatter, from public or private digital telephone exchanges to telephone handsets; and from data communications and information technology systems generally to fibre optics and power supplies.

Communications 82 is a unique and continuing support from national and international authorities, including:
International Telecommunication Union
British Government - through the Home Office and the Department of Industry
British Telecom
and the two leading UK trade associations:
Electronic Engineering Association
Telecommunications Engineering and Manufacturing Association

The Communications 82 Conference is again organised by the Institution of Electrical Engineers, in association with the Communications Society, IEEE UK/RI Section, Institution of Electronic and Radio Engineers, British Computer Society, Institute of Mathematics and its Applications, and Institute of Physics.

Communications 82 is organised by Industrial and Trade Fairs Limited, Redditch House, Staphord Court, Edgbaston, Birmingham, B15 2JG. Tel: 021-625 5707 Telex: 337073 for Tony Davies Communications.

To: Print Services Dept, Communications 82, Industrial and Trade Fairs Limited, Redditch House, Staphord Court, Edgbaston, Birmingham B15 2JG, England. Please send me details of Communications 82.

Is routing information through your company always as simple as it might be?

With Digital's VAX Information Architecture, you don't need a detailed knowledge of the idiosyncracies of your corporate data base.

You don't need to hunt for information, or have your DP department spend weeks compiling programmes to unearth it.

You don't even have to speak computerese. You just need to know what you need to know. Whether the information is in Huddersfield or Honolulu, Accounts or Engineering, VAX Information Architecture will then present it to you in seconds. In a written report or graphics - you can choose which you prefer.

And it answers to simple commands, so even if you're not a computer expert you can receive the information you need on your own terminal.

You have the data to prepare sales forecasts, financial analyses, future market condition models or any other report, at your fingertips - literally.

If you are the company's computer expert, it's also a boon. It allows you to set up a flexible data base tuned to your company's requirements. It's cost-effective because programming is so easy and,

because the system is modular and fully compatible, you can add features as you need them.

Instead of wasting time on endless hunts for data, you can actually get on with running your department. And your programmers can get on with the job of programming.

To find out more, cut the coupon. You'll find it's the simplest way of getting from A to B.

Find out more about VAX Information Architecture.
To Teresa Gubbin, Digital Equipment Co. Ltd, Digital Park, PO Box 110, Imperial Way, Reading RG2 0TR.
Please send me full details on VAX Information Architecture. (CV 18/2)

MICROSYSTEMS '82

A four-page preview of next week's Computer Weekly exhibition for systems builders and industrial applications users

Hardware on the move in industrial control

by Martin Banks

THOUGH the popular conception of a robot is still of something not totally unlike C3PO in Star Wars, a growing number of industrialists in this country have a much clearer idea of what the machines are about, and what they look like: rather ugly and somewhat limited.

They are also generally rather expensive items, in the same way that early computers were rather expensive — and perhaps a little limited.

As with those early computers, microelectronics is likely to change all that in the robotics field. Indeed, the scope is now considerable for new robotic control systems that could be pieced together like Lego bricks. The degree of knowledge and skill required to use the bricks would be limited, and that probably the price of the system.

Recent advances in microelectronics, when applied to areas of the robotic and industrial control marketplace, indicate that the technology could soon be making some major changes to the way products are considered.

But all this sounds as though the application of microelectronics to

these areas is a new idea, when in fact industrial control was probably its first real marketplace.

To an extent, however, it is a coming back, for developments outside the industrial arena have influenced the way that systems are now designed.

Firstly, a little historical perspective: When the calculator began the first microprocessors from Intel and Texas Instruments (which also claims to have invented it, despite the awards to Intel's Ted Hoff) there were few around who even perceived that a tiger had been born, let alone that it was being held by the tail.

The early 4-bit processors were, by any stretch of the imagination, pretty dumb. There was really not that much they could tackle effectively. They were also programmable only in machine code, which meant that the programmer had to be pretty skilled just to get any application running well. In the early days, even assembly language was often just a fond dream for the future.

The first applications, therefore, were themselves fairly simple. Small control sequences in industry were an obvious target, especially where the device's ability to be re-programmed brought cost

Robot arms at work on a BL Metro body shell.

savings through such items as more efficient system design or engineering.

As the microprocessors improved, and then grew from 4-bit to 8-bit word lengths, so the size of industrial application also grew.

It was the availability of 8-bit processors that set things moving in another direction which was to have an effect on the future of robotics system design. The direction was to the hobbyist, and all that followed after.

The story is well known. A US magazine published the details of a new kit computer it had heard about. It was the MITS Altair machine, and this prompted two interesting lines of development.

One was the S-100 bus structure, a simple and not very

elegant approach to putting lots of different boards together in one box so that they would work together.

This bus structure, for all its technical intelligence, became very popular for it greatly simplified the problems of system design, configuration and implementation. It is a route that is the immediate ancestor of a whole genre of single-board computer systems from all the leading microelectronics manufacturers.

The other line of development was, as such, the entirely new market that the Altair stirred. The personal computer in all its various guises has become a huge success both for the makers, such as Apple and Tandy, and the users who have suddenly been given access to all this computing power at so little cost.

Certainly the cost factor has been crucial in the development of the biggest sector of that market: small businesses. Also crucial, and to some extent synergistic to the business market, has been the development of high level languages for the systems. To have tried writing business-oriented applications software in machine code or assembler was beyond all practical reason. The appearance of interpreters and compilers for Basic, Fortran, Cobol and Pascal has done much to make the real use of these systems possible.

There has been support for this trend with the parallel development of operating systems such as CP/M.

At the same time as this trend has been developing in software, microelectronics has been improving. Microprocessors have become more powerful, memory devices have increased their storage capacities, specialised controller circuits and other functionally dedicated devices have appeared, and gate array technology has developed to the point where the special chips that often form the impetus that hold systems together can now be produced easily and relatively cheaply.

Taken with the software developments, the improving hardware has greatly increased the flexibility of system design as well as its overall performance. The two are closely related, for the flexibility is primarily a direct function of the hardware's performance.

For example, the new families of microprocessor from companies such as Intel and Motorola offer a 16-bit word length and a large plus memory addressing

capabilities, greatly increase a system's capability of running good software.

"Good" in this context can also be taken to mean "bad" in purist terms, for the software will have been written in one of the high level languages, all of which are known for the major characteristic of code inefficiency.

Any program written in a high level language will take up more memory space than if it were written in machine code, even one that has been compiled. The trouble is that the program, if it is of any reasonable degree of complexity, will be almost impossible actually to write in machine code.

It becomes a relatively simple task for a user to order and construct say, a 16-bit computer system with 128 Kbytes of user memory, 64 Kbytes of system memory, and a complete set of interfaces.

Not only is it a simple task; it is also relatively inexpensive for the power that is then available.

Software is, by comparison, a problem for in the area of robotics and industrial control it is still very much a bespoke art form. But even here, hardware technology is starting to play a part. Software in silicon, firmware, is now starting to appear in a variety of guises. At one level there is the appearance of high level languages in read-only memory devices. At another level the beginnings of operating systems software in ROM is coming through. At a third level, dedicated function devices, such as arithmetic processors, are now available.

As this route is followed and expanded, so it will be possible for users to adopt the same approach with software as they do with hardware: purchase modules of the stuff they will come in the form of dedicated functions where needed, certainly a firmware operating system and high level language(s) module, and probably a collection of applications routines, such as arm movement control.

If the high level language is then as user friendly as possible, a non-technical user will be able to produce the programs required simply by requesting the order in which the routines are linked and run.

Systems development in the industrial area will then return to the industrialists who should, theoretically at least, best understand what it is they wish to achieve.

particularly the skilled personnel.

This may change, however. The hardware needed to go down the self-build route is now available, and in a form eminently suited to the requirements of the non-expert systems builder.

Most of the major semiconductor manufacturers now have complete families of board-based products, ranging from CPU cards, through memory expansion boards and on to general and specialised interfaces. Standard bus structures, in particular Intel's Multibus, allow any number of these boards to be connected together into a system with surprising ease.

The co-ordination of tasks in such systems is a complex and difficult problem.

Industrial control applications can broadly be divided into three major areas and the type of software solution depends on which area is being addressed.

Continuous control systems are those which are required to keep a process in a steady state through

use of what are called single loop feedback controllers. Sequence control systems require a degree more sophistication in general as they are charged with following a number of pre-defined tasks stored on some magnetic or other medium. Such systems are also required to cope with production losses, for example, where a number of different products are manufactured using the same equipment.

The most sophisticated of the three types are those under the heading of information processing systems. Here the system is not only charged with a control operation, it is also required to report on progress and in some cases take the initiative by making decisions in real time which will effect the industrial process without outside intervention.

The ultimate aim is to create a totally integrated factory system which will handle everything from raw materials to finished goods.

MICROSYSTEMS '82

Philip Manchester takes a look at the major problem confronting designers and builders of industrial control systems

Searching for the perfect micro software solution

INDUSTRIAL control is a broad and diverse application area for digital electronics, placing special demands on both hardware and software designers. Unlike most application areas which have been the target for computerisation, however, industrial control systems have a long established tradition of stretching available technology to the limit.

Early attempts at building control systems were severely limited by the capabilities of the hardware. Since the beginning of the microprocessor age, things have changed radically.

Micros have not only brought cheap processing power but have opened up many possibilities through the use of distributed power by placing processors throughout a control system.

Such systems do not allow the same latitude in software development as in most other areas. They are effectively "embedded" systems and are not necessarily under the direct control of a human operator. This means that the software developed for such systems must be more reliable and inevitably more compact than software used in less critical data processing applications.

The major problem confronting designers and builders of control systems is that of parallel processing.

In a typical industrial control system, a vast number of separately executing tasks will be going on at the same time. In some cases the results of one task will feed data to others.

The co-ordination of tasks in such systems is a complex and difficult problem.

Industrial control applications can broadly be divided into three major areas and the type of software solution depends on which area is being addressed.

Continuous control systems are those which are required to keep a process in a steady state through

use of what are called single loop feedback controllers. Sequence control systems require a degree more sophistication in general as they are charged with following a number of pre-defined tasks stored on some magnetic or other medium. Such systems are also required to cope with production losses, for example, where a number of different products are manufactured using the same equipment.

The most sophisticated of the three types are those under the heading of information processing systems. Here the system is not only charged with a control operation, it is also required to report on progress and in some cases take the initiative by making decisions in real time which will effect the industrial process without outside intervention.

The ultimate aim is to create a totally integrated factory system which will handle everything from raw materials to finished goods.

The National Physical Laboratory and the software house Scicon began work on their solution to this problem in 1977 with a multicomputer architecture called Demos.

Implemented using the Intel 8086 microprocessor, the system is known as Demos 86.

To give some idea of the software problems involved in such systems, Barry Brinkman of Scicon estimates that 80-90% of the cost of real time systems lies in the software.

In building the Demos system, the developers were acutely aware of the problems of parallelism and

have adopted a concurrent version of Pascal to build the operating environment.

Each processor in the Demos system contains a kernel which enables the system to be viewed as a single virtual machine. The operating environment or application support environment, written in concurrent Pascal, is responsible for controlling this virtual computer. The applications software is written in standard Pascal.

Brinkman describes concurrent Pascal like this: "Concurrent Pascal includes explicit constructs for concurrent programming. These provide a natural means for the programmer to express the way in which sections of the program are to execute in parallel, interact and synchronise. It includes mechanisms to specify explicitly access rights, which programs may have to be suspended and transmission delayed until the destination module is ready to receive data. This enables the concurrent Pascal program to be distributed across a multicomputer, the source and destination modules being accessed by their respective kernels."

As the applications programs are supported using this technique, they become distributed across the whole multicomputer despite the fact that they are written as a program for a single machine. This is achieved using a component called Sysgen.

The Demos system is extremely ambitious in its range, taking in

Computerised control and monitoring of multi-welders at a Midlands factory.

single modules and small sub-systems.

SDL has put Mascot together with the real time language Coral 66, the military standard in the

applications such as inventory control and production scheduling as well as the industrial process control applications. The ultimate aim is to create a totally integrated factory system which will handle everything from raw materials to finished goods.

Another approach to the problem of embedded systems has been developed by Systems Designers. Using the Mascot system built originally for military systems by the Royal Signal and Radar Establishment at Malvern, SDL has extended the technique for commercial application.

Mascot, which stands for Modular Approach to Software Construction Operation and Test, was designed to meet the very demanding needs of embedded military systems, where components of the same system are often developed in isolation for security reasons. It is more than just an operating system although it does contain an operating kernel in much the same way that Demos does. But the system is viewed from the beginning as a network of co-operating parallel processes.

Chris Nettleton, a senior consultant at SDL, defines the Mascot system as follows: "It defines a formal method for expressing the structure of a multi-programming or real time system. It imposes a disciplined approach to design which yields a highly modular program and encourages a program acceptance strategy based on the test and verification of

each module in isolation and then as part of the whole system."

As the applications programs are supported using this technique, they become distributed across the whole multicomputer despite the fact that they are written as a program for a single machine. This is achieved using a component called Sysgen.

The Demos system is extremely ambitious in its range, taking in

COUNCIL PLANS £1M+ BOOST FOR MICRO FIRM

Bradford Economic Development Unit (E.D.U.) has announced plans to provide a £1m+ boost for Microvitec, a small firm specialising in the development of low complexity colour displays. The E.D.U. has agreed to supply finance, land, a purpose-built factory and long-term commitment. Bradford itself provided the other ingredients that anyone in the micro-processing industry would need... a highly skilled work force, high technology services, micro electronics research at the University and excellent communications. The Bradford E.D.U. has helped to make Microvitec a success and could do the same for you. If you wish to find out just what the Bradford E.D.U. can do for you visit them and Microvitec on Stand 31/32 at Microsystems '82 or fill in the coupon below.

New ideas get off the ground faster in Bradford...

Less than 3 years ago, all Microvitec had was some very good ideas.

A talk with the Bradford Economic Development Unit (E.D.U. for short) converted those ideas into a viable product.

The E.D.U. supplied finance, land, a purpose-built factory and long-term commitment.

Bradford itself provided the other ingredients that anyone in the micro-processing industry would need...

...a highly skilled work force, high technology services, micro electronics research at the University and excellent communications.

The Bradford E.D.U. has helped to make Microvitec a success and could do the same for you.

If you wish to find out just what the Bradford E.D.U. can do for you visit them and Microvitec on Stand 31/32 at Microsystems '82 or fill in the coupon below.

See Microvitec's full range of Low Complexity Colour Displays - Interfacing with today's Popular Microprocessors on Stand 31/32.

...with L.C.C.D. LOW COMPLEXITY COLOUR DISPLAYS

This unique and economic Low Complexity Colour Display developed by Microvitec is a high-performance modular VDU designed to be driven directly by any high speed source to produce alphanumeric and graphic displays in sparkling colour with a clarity and legibility unmatched by normal TV monitors or modified broadcast receivers. In addition to economy, the L.C.C.D. offers a high-

quality specification featuring:

- 14" or 20" screen sizes
- Line density 70/25 line 50Hz operation
- Fully isolated switching power supply
- Direct RGB interface
- Standard of high-resolution options
- Available in three forms:
 - Unpopulated chrome-plated with frame
 - Molded structural foam case
 - Metal case

MICROSYSTEMS '82

In this preview of next week's Microsystems '82 at London's West Centre Hotel, David Casey talks to some exhibitors

'We like this exhibition because it is wholly professional'

PRESENTED with an exhibition list as densely packed as this winter's Football League programme, there is no shortage of opportunities for a computer company to spend its promotional budget.

If the pattern of stand bookings at venues during the past year is any indication, exhibitors are becoming more discriminating in their selection.

There are, of course, a handful of industry-wide shows which attract exhibitors from every sector. Compec, for example, is now a fixed point in the calendar for any company with a reputation to establish or preserve. A complete cross-section of suppliers and service organisations make contact at Olympia in November with an

equally diverse audience.

But scale alone is not the only factor in the decision to take a stand. More specialised exhibitions - Microsystems '82 among them - attract only a fraction of the visitors through the turnstiles at Compec, while offering more intensive exposure to a company's target audience.

Experience of appearing at perhaps half a dozen shows in one year provides a fair indication of the events which are likely to generate a financial return. Joining the exhibition circuit for the first time is therefore a daunting prospect for an organisation; the more so when that business is only a few months old, and when it is faced with personal microcomputer shows advertising to everyone from chairman

to the man in the street.

Mass Microsystems of Welwyn Garden City was formed at the end of 1981, but had no reservations about appearing at Microsystems this year. Richard Zawadzki, the customer support manager, visited the 1981 exhibition while with his previous firm and came away impressed.

"We were consultants in the defence field and used to attend several shows each year," he said. "The key to Microsystems was the quality of exhibitors handling up-market business. This is exactly the slot that we are aiming for in Mass Microsystems, so taking a stand was an obvious step."

With a range of specialised software which includes scientific word processing for micros, it is vital that Mass Microsystems reaches the customer target cost-effectively.

Could Zawadzki have achieved this by taking space at Compec? "We would hope to gain the interest of managers and senior representatives from large companies with their own research department, or smaller firms marketing their own product. In the more intimate atmosphere of the West Centre Hotel, we can demonstrate our systems effectively to this specialised audience. We are also inviting quality clients of our own to the stand," he said.

The idea that the more compact exhibitions may have an advantage for an exhibitor was taken up by Brian Bradford of Crellion Microsystems, exhibiting at Microsystems for the second year.

"Our experience is that we had a better quality of leads from the smaller shows than the larger exhibitions. This may be a subjective assessment, but I feel that a higher proportion of the visitors were really interested," he commented. With a product range of microprocessor development systems designed primarily for OEM customers, Crellion would be hoping to make contact with a broadly similar audience to Mass Microsystems.

Whether taking space at an exhibi-

Data Translation Limited

CAVILL: "Relatively small scale of Microsystems '82 on advantage."

Microsystems is at the West Centre Hotel, Lillie Road, London SW6 from February 24-26 inclusive. Opening times are 9.30am to 6.00pm and entrance is £1. The exhibition is not open to the general public.

bition leads to an increase in orders is a matter for conjecture. For Bradford, however, there was a direct relationship. "Last year we felt we had a good response because some first-class leads were generated - and we reckon that some of these converted into orders as a direct result."

Measured in terms of the total financial commitment, few exhibitors stand directly cover their costs for the hire of space, a display has to be mounted professionally, and additional product literature printed.

A major outgoing is the expense of manning a stand for three days. While this may be absorbed as a staff overhead in the short term, it must nonetheless be set against any profit which may arise from orders at a show.

An exhibition with a track record of attracting "quality" visitors from major organisations can cover the stand costs on the first day. Robbie Robinson is sales manager of terminal manufacturer Gresham Lion of Twickenham. He sees Microsystems '82 as an

important marketing tool.

"Dealing with major OEMs, there is the prospect of taking on board at least one substantial customer," he said. "This would certainly pay for the exhibition. We would hope to talk to perhaps half a dozen firms with whom we are not already in contact - and convert a few of these."

Robinson does not deny that the larger shows play a vital part in his marketing strategy. "We had a very good Compec but favour the smaller exhibition as well. Our British-made Lyme 5500 and 6000 VDUs caused quite a stir at Olympia. We were quite embarrassed with the response. But that has changed our view of Microsystems. We like the show and feel we have something to promote there."

Companies visiting firms like Crellion, Gresham Lion and Mass Microsystems are typical of those that the Economic Development Agencies would like to attract away from London and into the regions. For Gwent County Council, taking a stand at the show for the second year, the prospect of

meeting businessmen in the rapidly expanding microsystems sector is the main attraction. Based in a Special Development Area of South Wales, Gwent is offering an impressive package of financial and strategic incentives for high technology firms to relocate into the county.

Microsystems '81 was the most encouraging of the dozen major exhibitions at which Gwent County was represented last year. The industrial development team received several promising inquiries from visitors to the stand.

With major companies setting up in Gwent - Feranti, Mils and Plessey Marlow among them - this part of South Wales is taking off as a high technology zone which will attract microsystems and peripheral suppliers into the locality.

Harry Bexon from Bradford City Economic Development Unit clearly hopes to attract firms towards the North. Like his colleagues from Gwent, he will be at Microsystems for the second year.

High on the list of incentives he hopes to offer visitors to this year's exhibition will be the lower cost of living in West Yorkshire and the pool of labour with relevant skills.

There are other benefits, however. "Our local University at Bradford has developed with a slant towards microprocessor technology, so that many of the visitors

• Turn to page 25

MICROSYSTEMS '82

Show for decision makers

• From page 24

to Microsystems '82 would find its facilities relevant. As a City Council we can offer rent free accommodation where appropriate, and provide direct assistance under the government's microprocessor schemes."

Was it worth Bexon's team taking space at Microsystems? "Apart from the attractions of a National Park, there is a reserve of skilled staff with an electronics background - the residue from the closure of a local Thorn colour TV plant. While we have attracted a trickle of new electronics firms to Bradford, this has only absorbed a fraction of the people available. The show at the West Centre Hotel is a first-class opportunity to encourage more firms to come North."

Two months into Information Technology Year, the Department of Industry is hoping that exhibition and visitors alike will be taking up support under the Microprocessor Awareness scheme. With visitors to Microsystems drawn from specialist technology companies, it is vital for the DoI to retain a presence at the exhibition.

COLLINS: "We like the show because it is wholly professional."

The need to exhibit at the West Centre Hotel was emphasised in the commercial sector by Lloyd Collins of Rair. "It is essential that we mount a stand there, not least because it helps our distributors."

Rair has booked space at this year's show on the basis of its success in 1981. "We like the show because it is wholly professional, but we were also able to follow up some attractive leads for our Black Box and would hope to consolidate this with the new 330 range."

Collins is conscious of an underlying change in the awareness of exhibition visitors. "An increasing number of decision-makers come to Microsystems, making an ideal target audience for the company. The visitors have steadily become more sophisticated in the type of question they

Taking space at the same exhibition in successive years provides an opportunity for a company to "fine tune" the product range for display. Data Translation of Slough, for example, realised from Microsystems '81 that its high-speed data acquisition systems do not have a place in this particular type of show; there was very little interest shown in these products. The emphasis of the company's stand this year will be on interface boards, with one section dedicated to local area network systems.

Data Translation's John Cavill is confident that the 1982 show will attract a high proportion of potential network users. The relatively small scale of Microsystems '82 will prove a distinct advantage in his opinion. "It will enable the serious visitor to spend more time with individual exhibitors. While we accept that Compec is a very important event, its scale makes detailed discussion more difficult."

Seeing is believing when microcomputer-based systems are on show.

DATA ANALYSIS

... a method of analysing the operation of a business to allow the best computer system design.

A major reason for the development of costly and inflexible computer systems is the failure to describe the business, its data and how it operates. The Data Analysis methodology is a means of understanding what the business does independently of any consideration of the systems which may be used to computerise parts of it, and for analysing its data independently of the applications to which it may be put.

First published as a major series in Computer Weekly, Data Analysis was written by Rosaméry Rock-Evans and based on a methodology developed by Ian Palmer. Now reprinted in book form and fully illustrated, it is available from Computer Weekly.

DIGITAL RESEARCH

CBASIC-86™

CBASIC™ is the most widely used BASIC compiler/interpreter in the business community today. Its precision, portability and ease-of-use give commercial programmers one of the most accurate tools for implementing business applications. With CBASIC-86 for your IBM Displaywriter, you can run all applications written in CBASIC with little or no adaptation.

PASCAL/MT+™

A true compiler, Pascal/MT+ gives superior run-time performance for applications written in Pascal. The full ISO standard (draft 7185) is implemented, with many practical extensions. The optional Speed Programming Package boosts programmer productivity. With Pascal/MT+, your IBM Displaywriter is equally suited for technical and commercial applications.

SOFTWARE AUTHORS

We recognize your role in creating quality end-user application software: You are an ISV, an Independent Software Vendor. Digital Research's ISV plan is unique in the industry. We provide you with meaningful support: the "ISV Forum", language and O/S seminars, listing in our ISV Referral Catalog and technical backup. CP/M®, CBASIC, Pascal/MT+, and PL/I ensure the portability of your products.

For details on IBM Displaywriter compatible products or the ISV plan, contact Digital Research's exclusive European representative:

CP/M & IBM.

It's hard to imagine one without the other

If you're thinking about buying an IBM Displaywriter, or if you already have one, you need to know about CP/M-86™ from Digital Research. CP/M-86 is the most versatile operating system in the 16-bit microcomputer world, giving you access to hundreds of applications programs. CP/M-86 along with an application program turns your Displaywriter into a financial advisor, budgeting expert,

appointment scheduler, client accountant, or inventory manager, as well as a superb word processor. Call or write Digital Research's exclusive European representative:

SOFTWARE ENGINEERS ... Advanced Real-Time Systems

Wiltshire

£8,000-£10,000

The Company is a highly successful member of an internationally based Group. They are a leader in their field of supervisory and process systems to assist in the effective extraction and distribution of the world's energy resources. Major new contracts have recently been secured, making necessary the expansion of their software development section.

You will preferably have a relevant degree and upwards of two years' experience in all aspects of the development of real-time control systems. You must have experience of programming in low or real-time high level languages on mini or micro-computers. Knowledge of PDP-11, RSX-11, MACRO-11, VAX/VMS or RTL-2 would be ideal.

You will be involved in the design and development of systems using extensive Data Communications networks. Following development there may be a degree of overseas travel, as the software project teams also play a major role in systems implementation.

The positions will be based in a new purpose-built engineering complex located in the delightful Wiltshire countryside to which an excellent relocation package is available. In addition to first-class conditions of employment, the successful candidates can look forward to technically challenging projects together with outstanding opportunities for rapid career progression. To discuss the excellent opportunities available, please contact our Reading Office, quoting Reference: RT1/1802.

IBM SYSTEMS 34/38 RPG II/III ANALYST/PROGRAMMERS TO £11,000 + BENEFITS

If you have at least two years' professional experience in either an IBM System 34 or 38 environment using RPG II, RPG III or COBOL and/or knowledge of MAAPICS or DMAS II, then you could join a growing team of professionals specialising in providing computer services to IBM users in the South of England.

LOCATION - CROYDON

In addition to the salary quoted above there are substantial fringe benefits. For further details please telephone or write to Myriad (London).

SYSTEMS PERFORMANCE

Competitive Evaluation Manager

Berkshire

c.£15,000

This position will appeal to a well-motivated individual with in-depth experience of computer systems performance evaluation. He/she will have a direct effect on development policy across a range of systems.

The successful candidate must offer a comprehensive background in performance evaluation techniques related to both hardware and software. This is likely to be supported by a numerate degree and extensive current experience of at least one major computer system, ideally including its communications architecture. In addition the new manager must have the strength of character to be able to put over his/her recommendations at all levels in both technical and general terms.

The person appointed will have close ties with both the product development and marketing groups. He/she will hold total responsibility for meeting agreed objectives.

This important position carries a high commencing salary and a valuable benefits package including comprehensive relocation assistance where appropriate. The person appointed can look forward to a rewarding career path with an interesting future.

To discuss the scope of this position in detail, contact Myriad on Reading 585802 or write quoting reference: RW1/1802.

Contractors - The direct alternative

CONTRACTORS

The National Computer Contract Directory is a method of putting contractors and computer users in touch without either side having to resort to intermediate agencies. The potential savings made possible, to both sides, are substantial.

The following table is compiled from a survey conducted among one hundred contractors who were working on behalf of clients to whom they had been introduced by an agency. It shows clearly the distribution of payment for the various categories of contractors.

Category	Average Wkly Pay	Average Charge	Agency Margin	Agency Commission On Pay
Programmer	£319	£445	£126	40%
Senior Programmer	£371	£509	£138	37%
Analyst Programmer	£400	£569	£169	42%
Chief Programmer	£428	£670	£242	33%
Senior Analyst Programmer	£572	£780	£208	34%
Systems Analyst	£625	£870	£245	39%
Systems Programmer				
Consultant/Project Mgr				

If we extended these figures over a year comprising of 47 working weeks, then the annual commission charge on top of your pay varies from £5,405 p.a. to £11,466 p.a. depending on your category!

Because the first three categories accounted for over 70% of the sample, the weighted annual average distribution for all categories is as follows:

Category	Annual Charge
Programmer	£5,405
Senior Programmer	£6,405
Analyst Programmer	£6,405
Chief Programmer	£6,405
Senior Analyst Programmer	£6,405
Systems Analyst	£6,405
Systems Programmer	£6,405
Consultant/Project Mgr	£6,405

Looked at nationally, this means that five thousand contractors would earn over £30 million p.a. for their agencies!

NCCD

THE NATIONAL COMPUTER CONTRACT DIRECTORY

THE DIRECT ALTERNATIVE

For those contracting companies and clients, who make contact and negotiate directly, this margin is available for redistribution in the form of:

- Increased earnings for the contractor, or
- Reduced costs for the client.

In reality, those negotiating will probably allocate a portion to each side and, purely as a guideline, NCCD has published the following pay indicator based on a 50/50 allocation of margin:

Contracts through NCCD will earn you between £2,950 and £11,500 extra annually.

Category	NCCD/WEEKLY RATE	47 WEEKS
Programmer	£382	£17,954
Senior Programmer	£440	£20,660
Analyst Programmer	£484	£22,748
Chief Programmer	£489	£22,943
Senior An. Prog.	£581	£27,287
Systems Analyst	£681	£32,007
Systems programmer	£747	£35,119
Consultant/Project Manager		

This indicator will be updated quarterly and made available to advertisers and subscribers.

THE DIRECTORY

The ideal situation is to make details of all contractors available to every major computer user.

The National Computer Contract Directory is a practical system which achieves this purpose.

All entries will be classified under appropriate headings e.g. category, hardware, software, location etc. and a cross-reference system will enable the directory user to find specific skills easily, such as CICS, MVS or banking experience. In addition the format will include a profile which augments critical data.

The directory will be made available to all major users in the U.K. and will be updated on a quarterly basis. A busy international section is also envisaged which will positively benefit those wishing to work abroad and those users who increasingly depend on British expertise.

AGENCIES

The ideal agency would know of every contract and every contractor. Unfortunately, few if any, contractors are registered with every agency. Therefore, in order to access a realistic proportion of available skills, the client must be in contact with over one hundred agencies!

As it is only practical for the client to communicate with a limited number of agencies at a time, it is certain that the contractor misses many opportunities.

Assuming an opportunity, suitable or otherwise, does occur, the contractor's interests are seldom of primary importance during negotiations. The rate the client can afford and the commission the agency is seeking are the central issues. It is often the case that, if the agency charges are too high, the client will not use the contractor, so depriving him of work and income.

NCCD
THE NATIONAL COMPUTER CONTRACT DIRECTORY

Potential clients will have:

- A method of eliminating indirect costs.
- A comprehensive database of specialist skills.
- A simple method of access to all contractors.

1982-83 TAX LEGISLATION

It now appears certain that, from April 5th 1982, those contracting companies who find work through agencies, will have 30% of their income deducted. Under certain circumstances exemptions may be granted and a method of setting-off against P.A.Y.E. liabilities may operate. It is significant, however, that those companies who market their services directly and negotiate contracts without being introduced by an agency are treated like any other business and have the full cash-flow benefit that derives from receiving payment intact.

COMPARISONS BASED ON AVERAGE INCOME/CASH-FLOW

WHAT YOU GAIN

- Your contracting company is constantly advertised to regular users ensuring continuation of profitable work and minimal 'down time'.
- By releasing more income to your business you are assured of the increased profits and cash flow necessary to expand.
- Each additional assignment you receive, as a result of your entry, increases your client-base.
- For those people interested in the growth of their business, NCCD is a vital marketing tool.
- This entry remains permanently in the directory - free of any charge!

What do you have to lose?
...it's free

REAL-TIME SOFTWARE

c £8K to £10.5K + relocation Coventry

Today's up-to-the-minute telecommunications industry provides a perfect illustration of the value of applied real-time computing techniques.

The linking of computers and telecommunications, in particular in the automated office and information systems environment is big business, with worldwide investment running into the hundreds of millions.

GEC Telecommunications Ltd is in the vanguard of development in the field supplying sophisticated equipment to telecommunications authorities, business and military users across the globe.

Currently we are looking for a number of talented real-time software engineers to reinforce the teams at our Coventry headquarters, working on these interesting projects from concept to final customer acceptance.

The people we're looking for will be graduates with at least three years proven success in the development of medium or large systems using a high level language. A willingness to take responsibility is essential, since you could well find yourself leading a team.

Salaries will be negotiable in the range £8-10.5K. Other big-company benefits include a generous relocation package where appropriate.

Interested? Then write to Mr. Z. K. Flizak, GEC Telecommunications Ltd, P.O. Box 53, Coventry CV3 1HU.

GEC
Telecommunications

WE ARE NOW EXPANDING AND REQUIRE A RECRUITMENT CONSULTANT

So what is different about us? We are an established professional executive search consultancy with a select reputable client portfolio involved in all aspects of recruitment for sales, marketing and technical support personnel in the high technology market.

We need (preferably) an experienced consultant or a salesman with a good understanding of computing. The successful candidate must possess strong self-motivation and FLAIR!!! This is a ground floor opportunity and therefore career prospects and remuneration are dependent on the consultant's achievements. Interested? Then contact,

D. G. H.

D.G.H. Management & Recruitment Consultants

HR

Business Development Manager

c £15,000 Base Salary (negotiable)

Our Client is a leading International Systems Consultancy specialising in the mini and micro computer areas, providing a full range of consultancy, systems and software development services and products. Established for over 12 years, they have concentrated on the high technology aspects of computing, and have achieved a standard of excellence second to none, in the areas of:-

Defence Information Systems Communications
Advanced Software Technology
Real Time Systems

One particular area of success has been within the Defence sector of the electronics industry, and as a part of their 1982 business plan they wish to reinforce their effectiveness with a skilled executive, who will have sole responsibility for this market.

Ideally you will have had a background in real time systems development in the defence or electronics industries, and then have moved into a Sales and Marketing function where you will have spent a minimum of 3 years. Whether this latter experience has been gained in a service or product sales environment is immaterial. Remuneration comprises a base salary of at least £15,000, and will include an excellent range of fringe benefits, including a prestige company car, assisted pension package, permanent health schemes, and if required a generous and full relocation package.

For further information and an immediate confidential interview, telephone Chris Fry on 01 935 0671 (24 hour answering service) or 05827 2354 evenings and weekends.

Specialist Computer Recruitment Ltd

pro-bel

A progressive and rapidly expanding company in the broadcast industry.

MICRO PROCESSOR APPLICATIONS ENGINEER

We are in urgent need of an engineer to design processor-based control systems for our custom-built audio and video routing systems. This involves the specification of hardware arrangements using our 6802-based processor system and the preparation of software on our Tektronix development laboratories to meet specific customer requirements. Previous experience in fault finding at circuit level and software preparation in assembly language is essential to this post as is a willingness to shoulder responsibility for control of large broadcast assignment routers.

Salary is negotiable in the region of £8,000 p.a. to which a valuable benefits package will be added after a qualifying period. For further information and an application form please apply to: Graham Roe on Reading 566123. (0678)

EXPERIENCED COBOL PROGRAMMER AVAILABLE NOW FOR SHORT TERM CONTRACTS

Worked with Honeywell L62, L64 IBM 370/ICL 1900 and also conversions.

Senior Systems Analysts

Hewlett-Packard experience

to £9,000, plus London Allowance, plus guaranteed bonus and large company benefits

We are responsible for the UK manufacture of Glaxo pharmaceuticals and their sale in this country. If you have two years' experience of systems analysis, plus a programming background including COBOL, IMAGE, VIEW and QUERY, we invite you to join our successful and expanding development team. Over the past three years we have built up an on-line distributed database system on Hewlett-Packard computers which is unrivalled in the U.K.

Just look at this:
• 8 x HP3000 Series 44's and 4 x HP3000 Series III's for operational work
• 3 x HP3000 Series III's for development
• 2 x HP3000 Model 64's on order, delivery April/May
• Over 250 terminals and further 50 on order

This on-line distributed database network serves twelve widely separated factories, warehouses and offices.

But this is not all, we are installing micro processor systems at the factories, and we are developing the use of stand-alone systems, database-linked word processing, and electronic mail.

We are developing computer systems in Accounting, Production Planning, Marketing, Personnel, and many other areas: backed by strong teams for technical support, database administration, communications management, and operations.

If you have the experience we require and would like to work with the latest equipment, using it to the full in an expanding environment, please write or telephone for an application form to: Mr. A. Winn, Site Personnel Manager, Glaxo Operations UK Ltd., Greenford Road, Greenford, Middlesex, or call 01-422 3434, ext 2325, quoting ref. AW/224.

SHAPE TECHNICAL CENTRE The Hague Netherlands

A NATO technical/scientific establishment has a vacancy on its international staff for a:

SCIENTIFIC ASSISTANT

to work primarily as Senior Programmer under supervision of a Project Leader.

DUTIES:

Program design, development, coding, debugging, documenting, installation, acceptance testing for interactive, internetted, mini- and microcomputer systems. Supervising junior programmer(s) and training of military personnel for use and maintenance of software products.

Keeping the laboratory current, secure and tidy as to system software, storage of programs and datafiles, and procurement of peripherals.

QUALIFICATIONS:

The following qualifications are mandatory:

Education
Certificate equivalent to UK HNC, HND; Dutch HTS; or German HTL in Computer Science, Mathematics or another subject in which Computer Science forms a major part.

Experience
Five years' practical programming (incl. HOLS) experience including design and system acceptance testing. Two years' in-depth experience in use of real time interactive operating systems, including minis and micros. Candidates with specific qualifications on PDP-11 hardware and software will be preferred. Initial annual net salary for non-Dutch married officials without children amounts to DG 50,874. Candidates who are nationals of one of the NATO countries should apply to the Personnel Officer, SHAPE Technical Centre, PO Box 174, 2501 CD The Hague, Netherlands, quoting reference CCS/1/82, within three weeks of the appearance of this advertisement.

Comms. Consultants

U.S./London: Salaries to £17k + Allowance

Consultants and Senior Consultants with extensive design & development experience in the fields of Voice/Data PBXs, Public Data Networks and distributed processing networks are urgently required by a leading Communications Systems Supplier and Consultant. These positions will strongly appeal to those who not only wish to participate in the formulation of data communications strategies but also have an interest in retaining a strong technical bias in their work. Naturally, familiarity with ISO and CCITT standards is a prime requirement and those applicants who have sat on one of the standards committees will be especially welcome. A degree of mobility is essential as most positions involve some European or transatlantic travel. Ref: L77/A

Navigation Systems

West Home Counties: Salaries to £13k

A highly regarded supplier of precision electronic instruments is seeking a number of Software Development Engineers with a minimum of one year's industrial experience. The successful candidates must include total fluency in one or more of: PASCAL, FORTRAN or MACRO-11. Of particular interest are candidates who have an in-depth knowledge of the development of complex software where high reliability is a critical operating factor. Ref: L77/B

Management Consultants

London: Salary to £18k

Our client, based in Central London, has an enviable reputation as one of the U.K.'s most prestigious Management Consultants. An expanding client base in S.E. England has produced vacancies for additional consultants to join existing project teams. All candidates must be self-confident, presentable and have good personal communication skills. It is anticipated that you will be a graduate aged 28 to 34 with the ability to appreciate problems from a business, technical and political point-of-view. Particular requirements are for consultants who have a knowledge of structured design techniques, Data Base Designers for Systems or networking in a commercial Data Processing environment. Applicants who have experience of leading or managing a project team will, of course, be considered for more senior positions. Ref: L77/C

Process Control Systems

London/Benelux: Pkg to £14k

Real Time Programmers and Senior Programmers are required for the Research and Development facility of a major multinational corporation. Of particular interest will be those who have participated in the development of PDP-based process control systems or have gained experience of simulation systems utilising any 32-bit minicomputer. Software expertise should include fluency in a high level language such as Fortran, Pascal or RTL/2 with, preferably, a good knowledge of an Assembler as an additional skill. Candidates who have also worked in a multi-microprocessor environment will be especially welcome. Ref: L77/D

Micro Design Engineers

Wilts/Avon: Salary to £10k

A number of Micro-Processor Design and Development Engineers are sought by a leading micro-computer manufacturer or manufacturer. As there are a considerable number of positions available, the variety of skills required is, necessarily, diverse. However, experience in one or more of the following areas is essential: customisation of Operating Systems such as CP/M or MP/M, with a salary premium attached to a knowledge of a networking O.S., compiler and cross-compiler development particularly if utilising PASCAL or C; familiarity with a leading MDS such as ISIS and, also, experience in the design and production of interface hardware and software. A degree of customer contact is a feature of most of these positions and, therefore, an outgoing personality and good communications skills are required. Ref: L77/E

Micro Pascal

Herts: Salaries to £10k

The Research & Development division of a leading multi-national corporation requires a number of programmers to assist in the development of both Application and Systems software. All respondents should possess a Degree or H.N.C. in a relevant discipline followed by at least two years in industry. A minimum of one year's development experience on either Intel 8080/85 Z80 based systems preferably running under CP/M, is essential, as is fluency in Pascal. A useful supplementary skill would be a knowledge of an Assembler language. Ref: L77/F

Sales & Marketing Engineers

Oxfordshire: Salary £13k + Car.

A leading Software and Total System Supplier has a requirement for a Sales and Marketing Engineer for its Regional Headquarters. Candidates, preferably aged 28-35 years, should hold at least one numerate degree. It is an absolute condition of this appointment that you should offer direct experience of all of the following work areas: marketing studies, product appraisal and planning; 'front-line' sales involvement to either the public or private sector; in-house and customer technical support of micro-processor based systems within a high technology environment. Of additional benefit will be those candidates who can demonstrate expertise in software development of compilers and the generation of tuning of real-time oriented Operating Systems for which a salary premium will be paid. Ref: L77/G

Comms. S/W Designers

E.E.C.: Salaries to £16k

Interesting opportunities have arisen for Communications Software Designers to be based at several European locations. Our client, a multinational Systems & Software House, is currently seeking professionals with a minimum of two years software development experience and a strong commitment to working overseas. Suitable applicants will be graduates who can offer fluency in Assembler and at least one high-level language, preferably CHILL, ESP-L/I or Pascal. If you have experience in the development of a digital exchange system or have a knowledge of TSS programming techniques, then you will be of particular interest. The remuneration package offered is excellent and, of course, a premium will be paid to applicants who offer either French or Dutch spoken language ability. Ref: L77/H

Licensed by O.G.E.

Lic No. BE/271/ (6350)

The Mining Research and Development Establishment's programme covers research development and testing in all fields of science and engineering associated with coal mining. The Computer Systems Development Branch is responsible for Minos computer systems which have been adopted as a standard by the N.C.B. for colliery remote control and monitoring applications. Work is in progress to increase the range of facilities and applications including work on major projects such as the Salford Coalfield.

We have two opportunities for:

Software and Systems Engineers

to £10,000 plus benefits

with knowledge of and interest in one or more of the following fields:
* application program development * control of software standards and production * safety aspects * software maintenance * compilers and operating systems.

Candidates should have a degree in computer science, engineering or other science subject and preferably have practical experience in program development in process control systems for industrial applications, experience of PDP11 systems, RSX11M and Coral 88 would be an advantage.

Major developments being undertaken include: monitoring coal face performance, monitoring and control of electrical distribution systems, protective control and management of underground and surface fixed plants such as fans, pumps and water distribution systems, coal transport network control and mine ventilation monitoring.

Salaries, currently under review, will be in the range £6,000 - £10,000 depending on qualifications and experience. Excellent benefits include nearly 6 weeks' annual holiday and self-financing incentive scheme.

Please write with full details to:

NCB Mr. D. J. Allsop, Staff and Administration Manager, National Coal Board
Mining Research & Development Establishment, Ashby Road,
Stanhope Bretby, Burton-on-Trent, Staffs. DE15 0DD

DIRECTOR FOR A MAJOR PROJECT IN INFORMATION TECHNOLOGY

ADONIS will be a

document delivery service supplying on demand copies of scientific articles from a computerised database growing at a rate of more than 200,000 articles per year using Laser scanning, optical disc and high-speed printing technology.

Responsibilities include the development and operation of a database creation centre, probably located near London, and the marketing of a complete document delivery system to major libraries throughout the world. A staff of 15-20 is envisaged, including a technical sales team.

Applicants should have a successful record of management at a senior level and of marketing sophisticated computer-based library and information systems. Experience of publishing would be an advantage. The appointee will report to a Board representing a consortium of major international science publishers.

Salary and conditions will be commensurate with the level of expertise and experience required of the successful candidate.

Applications should be sent to:
ADONIS Project Secretary
B. T. Stern
Elsevier Science Publishers
P.O. Box 2400
1000 CK Amsterdam
The Netherlands

before Friday, the 19th of March and should give full details of past as well as current activities. If more information about ADONIS is required contact B. T. Stern at the above address.

UNIVERSITY OF ZAMBIA
Applications are invited for the post of
DIRECTOR OF THE COMPUTER CENTRE

Applicants must hold a higher degree with between three to five years computing experience, of which at least two years must have been in a supervisory or managerial capacity. Experience in teaching Computer Science or training computer staff would be an advantage. The appointee will be responsible for providing the computing resources for all requirements in the University. Salary scale K 3,700-11,100 p.a. (£ sterling = K 1.60). The British Government may provide salary supplementation and associated benefits. The rate of supplementation, which will be negotiated in appointment, is reviewed annually and is normally 10%. Two to four year contracts (initial seven years) are available, including a curriculum vitae and naming 3 referees, should be sent to the University Secretary, University of Zambia, PO Box 3330, Lusaka, Zambia, to arrive no later than 23 March 1982. Applicants resident in UK should also send 1 copy to the Committee for International Cooperation in Higher Education, The British Council, Higher Education Division, 10 Basing Gardens, London, SW4 2BN. Further details are available from either address. (19817)

Our Clients are a leading international Company, providing a wide and varied range of computer solutions to industry and commerce. 1982 will see the introduction of exciting new products, and thus demands the appointment of three key Managers, each of whom should possess no less than 7 years computer industry experience.

This Senior Sales Management post requires of the successful candidate, a stable and proven track record within the computer industry. In that time, you should have gained significant Sales Management and Marketing skills, and be able to demonstrate a sound business knowledge and commercial judgement. For further information and confidential interview, contact Cathy Tracey on 021 236 3781 or 021 705 4583 (evenings and weekends).

This appointment requires the combined specialist skills of Major Accounts, Sales Management and Marketing. You should be able to demonstrate a proven track record within these areas of the computer industry, as you will hold a significant front-line Sales Management responsibility for all UK major accounts - penetration and development. For further information and confidential interview, contact Chris Fry on 01 936 0671 or 05827 2354 (evenings and weekends).

This position demands an in depth association with the computer industry, where you will have acquired significant skills in both Sales and Marketing environments. Recent Product Management involvement in such areas as Networking and/or Distributed Processing would prove invaluable. For further information and confidential interview, contact Peter Dudgeon on 01 935 0671 or 01 674 8627 (evenings and weekends).

Specialist Computer Recruitment Ltd

SA Computer
Specialist Recruitment

PROGRAMMERS. TRY TO THINK OF US AS A FIRMWARE HOUSE.

Not in the technical sense, of course.

But can you think of a better way to describe a company that's neither a software house, nor a manufacturer, but a rare and powerful combination of the two - and that has the resources of the Raytheon Group behind it?

Now, it's not asking very much of you to imagine the difference between working for that sort of company, and one that wears a more conventional label.

For example, picture yourself working on a TP Network with the reassuring knowledge that the terminals it uses could be made by your own company.

Interesting thought, isn't it?

Equally interesting is the way working with our 300-strong Professional Services Division can transform your career.

Your experience base broadens quickly and dramatically. In a short time, you've tackled a spread of work that most people wouldn't see in years.

You acquire the competence - and the confidence - to take bigger, more personal responsibility for bigger projects.

And you enjoy, the rewards and status to match.

Talking of rewards, we're now offering around £12,000 for men and women with five or more years COBOL programming experience in commercial, financial or industrial applications. We also have vacancies for people with as little as 18 months experience - and salaries of around £7,000 to match. But regardless of the length of your experience, we'd like it to include IBM, Hewlett Packard or Data General hardware.

Obviously, such a company isn't the right professional environment for everybody.

But for men and women with the imagination and intelligence to grasp both broad systems concepts and technical subtleties, Data Logic is the place to be.

If you're with us so far, you won't want to waste any more time before you find out more about Data Logic's approach to computing, and about what working with us could do for your career.

So your next step is to phone David Robinson on 01-578 9111, he'll make time to give you all the answers you want. Alternatively, send your c.v. or phone for an application form to Data Logic Limited, 320 Ruislip Road East, Greenford, Middlesex.

Data Logic

A Raytheon Company

Towards the total system

HOLLAND

IBM ANALYST-PROGRAMMERS AND PROGRAMMERS

ADVANCED IBM INSTALLATION

The organisation utilises large IBM hardware and an on-line database system is operational. In addition, a network with distributed databases at its offices in North and South America and Europe is being set up. COBOL is the main programming language.

WORKING ENVIRONMENT

The development team comprises a number of experienced analyst programmers who work individually on projects or combine into small project teams as the need arises. A high proportion of the staff is British and English is the working language of the installation.

EXPERIENCE REQUIRED

For the analyst programmer vacancies, highly experienced candidates with at least five years' varied commercial work utilising COBOL on large IBM hardware are needed. Some database and TP experience is desirable. For the programmer vacancies, three years' experience of COBOL on large IBM hardware and software with exposure to DB and TP are desirable. For both positions training will be given to fill any technical gaps.

SALARY & BENEFITS

There is considerable flexibility in what can be offered and in addition to the basic salary, a vacation allowance, annual bonus and tax-free travel allowance are paid. The total package will range from perhaps £11,000 at the more junior level to £17,000 for a suitable senior person and will ensure a substantially higher standard of living for selected candidates. Medical insurance is paid by the Company.

RELOCATION

A generous relocation package is offered to help candidates and their families settle in satisfactorily.

LIVING IN HOLLAND

Many British computer staff work in Holland and it is in many ways the "softest landing" for those who wish to move to continental Europe. The client is located in a small town near the coast and accommodation in the area is not difficult to find and the cost of living in general is now lower than in the UK, due to Holland's lower rate of inflation.

LANGUAGE

English, as well as being the working language of the installation, is generally spoken throughout Holland, which considerably eases settling in problems.

INTERVIEWS
Initial interviews with the client's representatives will be held at our offices in Nantwich on 4th March and in London on 5th March.

For an initial discussion, ring me, Neville John, on (0270) 827208 Office Hours or on (0270) 213116 Other Times, or write to me at the address opposite, quoting Ref 207/CW.

NANTWICH Cheshire
(0270) 827 208

Technical Projects Manager

£14,000 to £18,000

Candidates

Candidates will be required to demonstrate extensive previous experience in the development and control of real time computer systems based on large minis, e.g. VAX and Honeywell.

Candidates must have up-to-date experience in structured design and implementation techniques as well as experience in estimating, resourcing, project planning and control.

Their career to-date will show an above average rate of progress, variety of experience and previous positions of responsibility. It is unlikely that suitably qualified candidates will be below the age of 30.

The Position

The successful candidate will be responsible for one or more projects being undertaken on behalf of clients. This could require different responsibilities on different projects simultaneously. Self presentation in the form of written and oral communication is a normal and regular requirement of the job as is a professional manner with clients and staff. The opportunities for advancement are excellent. The position is based in Central London although some travel to client sites will be required.

The Company

Our client is a successful, profitable and expanding company with an international reputation for advanced computing and communications skills. They provide services and products in various countries around the world to major companies, professional bodies and government organisations. For employees the company provides an excellent range of benefits including relocation assistance where appropriate. Prospects for advancement and long term career development are excellent.

Apply in confidence to Terry Harvey by sending personal and career details, or contact him for an application form, evenings 01-4066 4705 or daytime as below.

Programmer/Statistician

Variations exist in the Resource Management Group of the Computing Division at the Rutherford Appleton Laboratory. The positions involve various activities associated with the management of the computing resources on the RERC network. Knowledge of programming, statistics and database techniques is essential. A familiarity with IBM's CMS will be a distinct advantage.

The user community is some 2000 Scientists and Engineers in the British Universities. The computing system consists of large IBM batch and interactive machines (3090/3091) and various multi-user minicomputers on a large distributed network throughout the UK.

Posts are based at the Chilton site and will be in one of the following grades:
Scientific Officer £6,176 - £8,964
Higher Scientific Officer £8,530 - £8,989

Some assistance with removal expenses may be allowed in appropriate cases. Appointment as a Higher Scientific Officer requires a good honours degree and several years' experience in this field.

The Laboratory is a friendly community with its own restaurant and sports facilities nearby. We offer excellent working conditions and benefits include a local transport service, generous holidays, sick leave allowance and a non-contributory superannuation scheme.

For an application form, please write to Recruitment Office, Personnel Group, Science and Engineering Research Council, Rutherford Appleton Laboratory, Chilton, Didcot, Oxon. OX11 0QX, quoting ref VN026 or telephone Abingdon (0235) 21800 Ext. 510.

Closing date for applications: 11th March, 1982.

Bahrain Systems Analyst/Programmer

£18-20,000 p.a. Tax Free

There is a challenging and exciting opportunity for a suitably qualified applicant to join GIB's Systems Development team at Head Office, Bahrain.

The applicant should have worked in a banking environment, be articulate, self-motivated and possess an outstanding design/technical background.

He will be managing and leading three development teams. His functions will include working closely with System Development Management on planning, user training, modifications and system usage, installation bank-wide and the establishment of a Processing/Information network embracing all GIB locations.

The total remuneration package is highly competitive and is designed to attract candidates with sound practical ability and a proven record of achievements. The willingness and ability to train others is considered very important.

Applications, including full career details, should be addressed in the first instance to Mrs. M. Lake, Gulf International Bank, B.S.C., 8-13 King William Street, London EC4P 4LD.

All applications will be treated in strict confidence.

Gulf International Bank B.S.C.

PROCESS CONTROL

South Coast £13,000 neg.

Our client, a leading designer of custom built process control systems is currently undergoing a major expansion programme. To ensure the success of this programme our client is seeking to recruit a high calibre

SENIOR APPLICATIONS PROGRAMMER

capable of building and controlling a specialist group affording an Applications Software facility to all divisions of the company.

This is a senior position likely to appeal to graduates, with a minimum of five years' experience of applications software within process control, looking for an opportunity to work in a stimulating environment, where their innovative talents will influence the growth of the company. A good working knowledge of computer hardware/software and operating systems is essential, as is Assembly coding and at least one high level language.

The excellent rewards will reflect our clients progressive attitude and will not be a problem for the right applicant. Relocation expenses to this ideal location will be offered where necessary.

If you feel your career aspirations match our clients prospects then telephone Tony Tolpin on

Telecommunications Planning Analyst

Esso Petroleum Company Limited employs very extensive private telecommunications networks for transmission of voice and data traffic. Several SPC telephone exchanges, a telegraph message switch and a centralised teleprocessing control centre are in operation. The main computer comprises two large IBM mainframes and is linked to satellites via several Comten 3809FEPs.

A suitably qualified specialist is required to assist in planning and implementing telecommunication developments relating to voice, data transmission, telegraphy and facsimile.

The successful candidate will have a degree

or equivalent in telecommunications or electronics, be aged 25-35 years, have at least 3 years' experience in Project Planning of Systems and Networks and be ready to make a full contribution to this rapidly developing field. Salary and benefits are highly competitive and appropriate to the standing of a major international organisation.

Please telephone for an application form on (01) 834 6677. If you prefer, write with brief details of experience, qualifications and present salary to: Head of Recruitment, Esso Petroleum Company Limited, Esso House, Victoria Street, London SW1E 5JW.

COMPUTER SYSTEMS ENGINEER

BBC Engineering Division are looking for an experienced Systems Engineer to work in their Studio Capital Projects Department.

The post involves the analysis, design and implementation of software controlled systems for broadcast applications which include the routing of Audio and Video signals, Digital Signal Manipulation and Teletext generation.

The postholder would manage substantial projects which had contributions from engineers within Studio Capital Projects Department, from other specialist departments and manufacturing industry.

Projects may be undertaken for any of the BBC output Directories and considerable liaison with both manufacturers and broadcasting personnel is required. Candidates must have at least four years' experience in the analysis, design and implementation of mini-computer systems and preferably be a graduate professionally qualified in engineering or computer science. Previous experience of either broadcasting and/or OEC in other mini-computer equipment would be an asset. Candidates must be capable of clear expression both verbally and in writing and must be self-motivated. They should preferably be conversant with financial and project planning methods and techniques.

Salary £10,061-£12,334 p.a. according to qualifications and experience. Base will be in London but candidates must be prepared to work away from base at times throughout the United Kingdom.

Application forms may be obtained from BBC Engineering Recruitment Office, Room 344, 55 Cavendish Square, London W1A 1AA, quoting reference number 02.E.1089/CW. For further information, telephone Paul Jarrett, Head of Computer Systems Unit, B.C.P.D. on 01-740-9440.

(0842)

COMPUTER MANAGER

Salary £9,150-£10,152 Grade P01(1-5)

Applications are invited from persons with a sound technical background for this new post in the Treasury's Department.

The Council is in the process of replacing its ICL 7503 terminal link and replacing it with an ICL ME29/37 machine. Some links with the Berkshire County Council's ICL 2976 main computer will remain, but independent development together with local terminals and cash receipting terminals, is envisaged.

The successful applicant will preferably have experience of ICL equipment and systems, and possess the necessary managerial ability of commissioning the new ME29 and develop computing services within the Authority. Bracknell is a modern town with good amenities, situated in a rural area of East Berkshire, within easy reach of London and the M4.

Housing may be provided in appropriate cases. Benefits will include flexible working hours, a subsidised staff restaurant, sports and social facilities and the chance to join BUPA at a generous discount.

For further details and an application form, please ring Bracknell 56995 (24 hour answering service) and leave your name, address, job title and where you saw this advertisement. Forms must be returned by 6 March 1982.

Thorntons

(0841)

Communications Technician - up to £11,000

Murks & Spencer need an experienced Communications Technician to work in a small but rapidly expanding team at their Computer Centre in Chiswick.

The network consists of local and remote terminals using British Telecom and private modems linked to our central ICL mainframes, and to mini computers throughout the business.

Your work will involve the maintenance of the existing network, planning of future enhancements and installation of communications equipment and mini computers. You will therefore have a thorough knowledge of communications equipment diagnostics and be keen to train and develop junior staff. This position may appeal to someone with an engineering or electronic background.

The sterling salary will range up to £11,000 p.a., depending on experience. In addition, our excellent staff benefits include a non-contributory pension scheme, free life assurance and profit sharing after a qualifying period.

For further details and an application form, please apply to:-

Mrs. E. K. Tyack, Staff Manager,
Murks & Spencer, Guardian House,
272 Gunnersbury Avenue, London W4.
Tel: 01-994 3636.

The closing date for applications is 28th February, 1982.

NORTHERN JOB OPPORTUNITIES - 1

'Skilled systems analysts are strongly in demand'

by Eugene Dempsey

AGAINST the background of increasing indications of a move out of the deep recession, the signs are that Northern computer users are starting to activate new development plans that have stayed on the shelf during the past gloomy months.

This clearly discernible movement, says David Eacott of Computer People North, spells an immediate strong demand for skilled systems analysts - and the forward prospect of a severe shortage of experienced programmers. He says: "The work is there now for all those systems analysts who can fulfil the demand for good skills, and in the main this is especially true of commercial and financial systems."

"As we come out of the recession, it is apparent that more computer users are planning ahead on the basis of more efficient systems which expose the fact that there has been an element of overmanning in the past."

In fact, this trend towards more effective systems which require lower staffing levels is not based on an actual policy of job-cutting. Rather, says Eacott, it is for the opposite reason: "These latest systems are calculated to attain a level of operating efficiency that acknowledges the reduced numbers introduced some time ago." Of course, this means that a more economic degree of staffing more than ever puts the microscope on the gen-

uine capabilities of computer people involved."

In general, the demand in the North for systems analysts tends to overshadow the position of programmers with one outstanding exception: those programmers specialising on such IBM systems as the CICS teleprocessor monitoring and DL31 database systems and normally concentrating on the use of Cobol language are in very short supply.

Looming over this current systems analysis-dominated picture is the major potential problem of a desperate programmer shortage in perhaps 12 to 18 months' time. Once the analysts have completed their development of many of the

new systems the requirement for programmers with two to three years' experience will become critical.

But there is the rub - for that length of experience dates us back to the start of the currently easing recession, when the entry of trainee programmers virtually dried up owing to what was explained then as "economic necessity".

Eacott feels that by the back end of 1983, we could be seeing in the North of England a return to the extremities of the late 1970s, "when programmers with an adequate degree of the right kind of hardware experience could not be had for love or money."

With four years of perma-

nent recruitment experience behind him, David Eacott has detected what to many will be a very surprising development. Salaries for highly qualified computer staff are now higher in many instances in the North-West than in the outskirts of London.

And with the relatively static situation regarding financial benefits, "quality of life" is seen by Computer People North as being more than an esoteric idea.

In addition to a level of cultural activity in Manchester and Liverpool which largely matches what London has to offer, David Eacott also points out that his 50-mile daily drive into the office takes under an hour!

Liverpool's Roman Catholic cathedral. Our culture matches London's, says Computer People North.

DATA PROCESSING MANAGER

Nigeria

£30,000

Our client, a major international company with interests both in the U.K. and abroad, is seeking a Data Processing Manager for Nigeria.

The successful applicant will control the whole computing operation including programming, systems analysis, hardware (currently an ICL 2903/2904) and will be directly responsible for:

- 1). Maintenance, updating of existing programs and program development.
- 2). Systems analysis.

- 3). Training and support of existing and new personnel
- 4). Existing hardware and future requirements.

This is a senior position and applicants must have proven experience of programming (COBOL/RPG 11) systems analysis for manufacturing processes, and have 3/5 years' operational management experience.

This is a staff position offering an excellent salary, free accommodation and the generous fringe benefits associated with a major international company.

Interested applicants should write with their career history to:

Mr. F. Butler, RESOLUX LIMITED
Recruitment Division
Alpha House, Beech Lane, MACCLESFIELD SK10 2PY

IBM Opportunities

ANALYST

Cheshire
c. £8500

If you have a minimum of 2 years analysis experience, ideally in manufacturing/engineering application areas, then our 'this clip' client could be very interested. A first class excellent career prospect. Relocation available to suitable applicants.

PL/1 + CICS

Cheshire
c. £7500

For the same client as above, we are seeking 2 experienced PL/1 programmers to work on the development of CICS applications, in a database environment.

Some CICS knowledge is required, but further training will be given, if necessary.

ASSEMBLER

North West
to £10,000 +

We are experiencing a strong demand for Assembler applications programmers, in a variety of IBM environments, DOS/VS or VSE, MVS, CICS, DL/1, etc are all of interest.

The Computer Age Bank needs you:

Systems Analysts - starting salaries according to age and experience - to £10,700 (with mid-year review). Relocation package available if necessary.

Traditional banks utilised new technology as it became available. National Girobank, founded in the late sixties, was a product of the computer age. Now in the eighties, due to the ever increasing demand for Girobank services more emphasis than ever before is placed on the use of computers in the highly competitive world of high street banking.

A massive development plan which will extend current services into full clearing bank status is now under way at Girobank's Headquarters at Bootle on Merseyside and in line with this next phase systems analysts are required NOW, to be involved in the design of the new TP systems and improved batch processes in this challenging and exciting new venture. Opportunities in this progressive, yet secure environment offer career progression in both data processing and, in the longer term into line management.

2900 mainframes are at the heart of the business systems plans, with extensive use made of a variety of minis and micros, as well as laser printers, OCR readers, COM, proof encoders etc.

Merseyside has many attractive housing areas from Chester on the Wirral to Southport on the

coast linked to a comprehensive road and public transport network. If there is need to re-locate a generous package is available. To help you make this career move a comprehensive information pack, detailing the company, job and area has been compiled, and is available to all serious applicants.

Interested? Then preliminary discussions about your future with National Girobank will be held at our Manchester, Birmingham and London offices.

Contact David Facott NOW on 061-491 1666 during office hours or Southport 211584, evenings and weekends, and let him help you. Computer People North, Sovereign House, Stockport Rd., Cheadle, Cheshire SK8 2BA (V48008)

Software Engineers Gloucestershire c.£11k

As part of the expansion and development of its software team this company, a leading producer of aviation equipment, is seeking to employ a number of experienced Software Engineers.

The Company

Manufacturers of complex avionics systems and currently supplying equipment to over 450 airlines and airforces in 138 countries, they are now developing the next generation of Flight Management Systems and need to expand their software team.

The Hardware

Based on inter-linked Intel 8086 series micro computers, the system is designed to manage the aircraft resources for optimum economy. Development is being carried out using a PDP 11/44 under RSX 11M using CORAL 66 and ASSEMBLER.

The Location

The Company is based near Cheltenham - attractive and accessible. A spa town and lively centre of music, art and sport, lying at the foot of the Cotswold hills. Nearby are all the major West of England routes (M4, 5, 6 and 50) and the railway connections are excellent.

Computer People Midlands have been appointed to recruit a number of Software Engineers who will be joining the Flight Systems Control department.

The Applicants

Applicants will have worked in a software/hardware development environment and have experience of Real-time and/or microprocessor systems. Knowledge of CORAL 66, MCS 86 or PDP 11 under RSX 11M would be an advantage. Applications experience would be enhanced by evidence of exposure to avionics and/or similar development areas.

It is unlikely that any applicant below degree level would be suitable and some evidence of potential for future leadership will be expected.

The Rewards

Successful applicants will be working at various senior levels in the department and salaries will range up to c. £11k. Benefits normally associated with such an established company will enhance these salaries. The company offers excellent career opportunities and a challenging work environment.

So, if you want to help our clients and yourself, ring Phil Harkcom on 021-643 8501 (office hours) or 021-308 4285 (evenings and weekends). Alternatively, complete and return the Freepost below.

DUBLIN SYSTEMS ANALYSTS

CEMENT ROADSTONE HOLDINGS LTD, one of Ireland's leading industrial companies, requires additional staff to implement its development plans. The Computer Division supports the Group's Data Processing requirements both at home and overseas. The equipment installed is an IBM 4341 with transmission, operating under VM/DOS/VSE. On-line facilities using CICS are now being extended.

The appointed persons should:

- (a) have a proven record of successful development and implementation of computer systems;
- (b) be capable of working on his/her own initiative and communicating effectively at all levels of management.

Experience of on-line systems would be an advantage.

Salaries and conditions are competitive and are in line with what one would expect from a leading industrial company.

For further details please contact F. S. O'Sullivan, Computer Services Manager, or Eddie Howard in London.

Cement Roadstone Holdings Limited
Computer Services Division, Saggart
County Dublin Ireland
Telephone (01) 503444 Telex 5171

DUBLIN IBM MAINFRAME AND/OR SYSTEM 34

ZEUS HERMES IRELAND LTD. are a highly prestigious software consultancy. The company is involved with the development of sophisticated software products which are installed and marketed throughout the world. In continuing with this success we require additional personnel with IBM mainframe and/or System 34 expertise - two years plus in any of the following would be of great interest.

- ★ INTERACTIVE SYSTEMS
- ★ TELEPROCESSING CICS OR SHADOW
- ★ OS/DOS VSE/VM CMS
- ★ COBOL RPG 11 and other programming aids.

Candidates should be pleasing in manner, ambitious and prepared to travel from time to time.

Excellent opportunities exist for highly motivated individuals seeking greater responsibility, reward and long-term career prospects. An attractive salary and benefits package can be expected. For further details please contact: Mary Kineally in Dublin or Eddie Howard in London.

TECHNICAL SUPPORT PROGRAMMER

BECTON, DICKINSON & COMPANY is one of the largest manufacturing companies in the rapidly expanding health care industry. We are situated approximately eight miles south of Dublin City. The company's OP activities are IBM 4341 based, utilizing VM/CMS, DOS/VSE, SNA, CICS, VTAM, COBOL, RACIS and TOTAL.

The Systems Analyst will play a major role in systems development and will be involved with users in designing and implementing a range of new systems.

Two years' working experience of on-line systems design, preferably on IBM equipment, is required. Experience in manufacturing Cobol and database systems will be an advantage.

The Technical Support Programmer should have 2/3 years' IBM System Programming experience. The appointed person will play a key role, evaluating software products and ensuring the smooth running of technical support.

An attractive salary and fringe benefit package awaits the successful applicant and relocation assistance will be provided where applicable.

For further information please write in confidence to Brian Clarke, Personnel Manager or contact Eddie Howard in London.

Attention to Detail System Test Engineers

Amdahl is one of the world's most successful manufacturers of large scale compatible mainframes. Our success springs from recognition that progress in this field means concentrating on the essentials. That means attention to detail in manufacturing, and testing to the highest standards of quality and reliability.

To maintain this standard we are looking for a small number of Highly Competent — SYSTEM TEST ENGINEERS who will be responsible for final test, debug and verification of Amdahl Computer systems. You will work in a professional team where prospects of advancement are excellent. We place a high emphasis on training, both in Ireland and in our headquarters in Sunnyvale, California.

To be considered for these positions you should have 3-5 years experience in final test or field support on medium to large scale computer systems. Experience of IBM 360/370 or compatible systems would be advantageous. An appropriate degree or equivalent technical qualification is desirable.

For Engineers, moving to Ireland represents several major benefits. It is one of the world's fastest growing computer industry bases. There are no local government rates and housing is available considerably cheaper than most parts of the U.K.

Amdahl is situated in an ultra-modern complex in Swords on the outskirts of Dublin. The Irish operation is an assembly and test facility exporting mainly to Europe. Our current workforce is just over 200 and this will continue to increase over the coming year with the introduction of our new computer, the Amdahl 580.

The salary and benefits package offered for these vacancies is very attractive and will include generous relocation where appropriate.

amdahl

If you would welcome the challenge of a new life and career then this is a superb opportunity to join a high technology leader at the forefront of an expanding industry.

Systems Analysts

**Saudi
Arabia
to £22,000
after tax**

Aramco, the world's largest petroleum and NGL producer, continues to offer the employment benefits and opportunities that are allied to their phenomenal growth rate and performance. During 1982, with IBM 3081's being installed, development workload will mean that additional analysts are required.

We wish to hear from candidates possessing a degree, HNC or equivalent qualifications in Computer Science, Business Studies or a related discipline, who can demonstrate at least six years' systems experience in an IBM environment. We are particularly interested in receiving details if you are familiar with Mark IV or a similar language and if you can offer effective user communication ability.

Analysts will work in areas including Inventory Control, Sales and Management Reporting Systems. Also you will prepare user manuals and systems presentations, providing training and conducting special studies as required.

Aramco offer indefinite term employment (Initially single status), free medical aid cover, free local transport, heavily subsidised and air conditioned accommodation, recreational facilities and regular repatriation flights.

For an application form and more information please telephone Nick Foulser (24 hour answering service) or write quoting ref: CW105-2F.

Computer Operations Manager

Central London-Retailing
c.£11,000p.a.

Here at Liberty's, one of the most famous department stores in the world, we're seeking an experienced systems professional to join our computer, friendly Computer Department.

The installation, which currently consists of an NCR 5250 with 6 disks running under IMOS 1 and 11, is linked with 4 VMEs — major expansion and integration of all DP systems is planned for 1983.

Therefore, the man or woman appointed must have at least 3 years' experience at a supervisory level in a similar installation and possess the ability to write or supervise production of small COBOL programs. Previous retail experience would be most advantageous for this challenging position.

Reporting directly to the Group Systems Development Manager you will be expected to ensure the smooth running of the department on a day-to-day basis, supervise junior staff and be able to work efficiently under pressure. Good written and verbal communication skills are essential. No shift working is required.

An attractive salary c. £11,000 is offered together with an excellent range of benefits of the standard associated with an organisation of our reputation. These include 20% shopping discount, subsidised restaurant and, after a short probationary period, free travel within the London Transport area.

Those who feel their backgrounds match our requirements should write with comprehensive c.v. to Mrs R. M. Pennington, Personnel Manager.

Data Processing Manager

The Company is a successful book publisher and distributor providing a high standard of D.P. Services for its customers and will shortly be upgrading its Data Processing to an ICL System 25 from the ICL 220 machines at present in use.

The D.P. Manager is responsible for the successful running of the Department and for ensuring that the business needs of the Company are met within a demanding time scale.

The successful candidate (male or female) will have had several years experience in data processing, using DMF II and assembler, and will also have had management experience.

This position is based in Plymouth and relocation expenses will be paid. The rewards include a five figure salary, company car and fringe benefits.

If you feel you could accept this challenging opportunity write giving details of work experience, qualifications, age and salary progression to: The Financial Director, Macdonell & Evans Ltd., Exeter Road, Plymouth PL8 7PZ.

Rediffusion Simulation Limited, has the following vacancies in its D.P. Department which uses two ICL 2946 and an ME 29, to which a system 25 will shortly be added. This provides on-line information to all departments in the company.

Systems Analyst/ Programmers

We have two Systems Development teams working in the areas of manufacturing information/control and finance. A Programmer with sound practical experience of Cobol, 2 years' minimum, preferably ICL 1900/2800, is required for each of these teams. A knowledge of TPS would be a distinct advantage, but training if necessary would be provided.

These vacancies offer real opportunity for systems involvement, with excellent career development prospects.

Operations Controller

Reporting to, and deputising for, the Operations Manager, the successful applicant will be experienced as a Controller/Shift Leader in an ICL environment using TME or DME, and be conversant with ICL utilities. He/she will be responsible for the smooth operation of Data Control Department. The Controller will work days only, whereas operations work a 3 shift system over 5 days.

Applications, written or by phone, should be made to:

Pat Jelliffe,
Rediffusion Simulation Limited,
Gatwick Road, Crawley,
Sussex, RH11 2RL

WANG

COMPUTING AND DATA SYSTEMS

Implementation Analysts

£11,000-£13,000

The Wang product range offers a system for every need and every budget, and covers total systems to individually tailored word processing systems.

In 1981, Wang's business achievements reflected significant market penetration and increased sales and profits resulting from a planned and controlled business strategy.

Such growth and success has led to an immediate need for 3 specialists for the European MIS Team, who will take responsibility for implementation and support of business systems with Wang European subsidiaries in:-

Germany
Austria
Switzerland

France
Belgium

United Kingdom
Holland
Sweden

All positions are based in Isleworth, Middlesex, but applicants can expect to be travelling about 50 per cent of the time.

The range of skills required by these key individuals cover technical, personal and linguistic accomplishments. Successful candidates will have had a broad exposure to Programming, Systems Analysis/Design and Implementation activities gained with a computer manufacturer, other service orientated organisation or large user installation over a minimum period of 5 years.

In particular, candidates with sound commercial experience should have a working knowledge of Order Processing, Marketing and Financial systems. Self motivation, the ability to work on one's own initiative and excellent powers of communication are essential, and for the overseas posts fluency in German and/or French.

First class remuneration packages await the successful candidates, so to discuss your suitability and to arrange an initial interview, call Rex Ashcroft on 01-935 0671 during working hours or Harlow (0279) 416529 evenings and weekends.

SENIOR SYSTEMS ANALYST TELEVISION COMPUTER SERVICES

£11,146-£13,661

Television Computer Services operates a comprehensive and highly successful Management Information System used by all departments in the planning and control of the production and transmission processes.

The systems form a base for other applications including costing, cataloguing, scheduling and Information Retrieval.

A Senior Systems Analyst is required by Television Computer Services to take over responsibility for a new financially based computer system.

Broadcasting presents a more exciting and challenging environment to that normally experienced by Systems Analysts. We require a strong self-motivated individual to rise to these challenges, and maintain a flexible and adaptable approach.

At least six years' experience in systems analysis, design and implementation including on-line systems is essential.

The person appointed must be aware of and understand management problems in the financial areas, and must be able to comprehend a large number of related developments including project planning and control to budget costs and target dates. It is also desirable that candidates have had experience in managing professional staff to time and cost budgets.

Based West London. Relocation expenses considered.

For further information on this post telephone Terry Smith on 01-743 8000 ext. 4593/4.

Please write or telephone for an application form direct to BBC Appointments, London W1A 1AA. (quote ref. 2110/CW and enclose s.a.c.) Tel: 01-580 3334.

Leibstadt Nuclear Power Station in Switzerland

Maintenance Engineer for Computer Hardware

55,000 Swiss Francs p.a. negotiable

RHINE, Switzerland

To be responsible for the complete maintenance of our Honeywell and General Automation computers and to report directly to the chief maintenance engineer (electrical). The service of microprocessors may also be required.

Ideally applicants should be:-

- around 30 years old and qualified to HNC or equivalent.
- experienced on maintenance of computer hardware and knowledge of software would be an advantage, but not essential.
- resourceful, capable of organizing their own and other persons work, both routine and in emergencies.
- some knowledge of German or French essential.

Candidates must be prepared to spend several weeks training at the Honeywell factory in Phoenix, USA. Leibstadt is in the German-speaking part of Switzerland, on the Rhine near the Black Forest, 50km from Zurich and this is a chance to work in one of the most modern nuclear power stations in the world, in a country with a high standard of living and low rate of inflation.

Please send details of qualifications and experience, quoting reference DWAW/21 to:-
Electrowatt Engineering Services (London) Ltd,
Grandford House, 16 Carfax, HORSHAM, West Sussex RH12 1UP.

CONTRACT STAFF SERVICES by TRIDENT Computer Services

High calibre computer staff represent a substantial investment and DP management are continually faced with the problem of maintaining the delicate balance between a realistic, economical permanent staff establishment and coping with irregular eventualities such as:

- ★ Additional manpower requirements over a limited period for development or conversion work.
- ★ Once-off specialist expertise not available in-house.
- ★ Temporary cover for indefinable peaks in workload; permanent staff sickness; vacancies in permanent staff positions.
- ★ Releasing permanent staff for other duties.

Situations of this nature are inevitable in the time critical environment of DP installations, but Trident's Contract Staff service alleviates these problems and helps users to contain DP budgets within reasonable limits by fulfilling project requirements when, and only for as long as the expertise is needed.

Trident believes in good client relationships, developed only by combining a responsive service with a truly ethical business approach, and welcomes requests for client satisfaction references.

For Project Management, Systems, Programming and Operations contract staff, with proven ability on all mainframes and a variety of mini and micro systems — CONTACT:

London EC3A 8BJ.

VME 2900 OPERATIONS CONTROLLER — CIRCA. £10,000

We are a firm of city solicitors planning to install, very shortly, an ICL 2958 to replace our existing ICL 2904 installation. Initially, the ICL 2958 will run both VMEB and DME2 systems using CME. Later developments will replace the DME2 systems in favour of a single VME operation.

Interesting system developments are planned for the future using TPMS and IDMS techniques to process the accounting requirements of our city office and overseas branches. Information processing using ICL 7700S is scheduled for operational running later this year.

An excellent career opportunity exists, therefore, for a DP professional with a minimum of two years' VMEB 2900 operations experience, preferably in a supervisory capacity. The successful candidate will be responsible to the Data Processing Manager for the control and organisation of all VME 2900 operations and will be expected to demonstrate managerial skills and the ability to supervise staff effectively.

Starting salary will be around £10,000 per annum and benefits include a non-contributory pension scheme (after one year's service if over 30) life assurance cover, BUPA cover, luncheon vouchers and a season ticket loan.

Apply in writing with full C.V. to: John Hamilton, Personnel Manager, Linklaters & Paines, Barrington House, 55/57 Graham Street, LONDON EC2V 7JA.

DATA CAPTURE - A UNIQUE
SALES OPPORTUNITY

PACKAGE - £60K & COMMISSION & CAR
BASE - MAIDENHEAD, AREA - UK, AGE - 25+

Numeris Arts is a young dynamic company dedicated to the rapidly developing market for electronic bar code data capture equipment. The company markets a number of unique laser products together with an expanding range of other established data capture terminals.

We now require a high calibre marketing orientated sales person to sell these products. Previous experience in one of the following is required:

General Electronics
Computer Systems
Retail Distribution
Materials Handling

The applicant must be a thorough professional, with a high degree of enthusiasm for the products and markets. He/she must be a sound written and verbal communicator with a capacity for extended field sales operation activity away from base.

Apply to Mark Merriott, Managing Director, Numeris Arts, Gardner Road, Maidenhead, Berks. Tel: Maidenhead (0628) 38763.

SYSTEMS/OPERATIONS
MANAGER

The successful candidate will be responsible for the implementation and development of Burroughs Key BMS packaged software on a recently installed B92 computer system. Duties will include the supervision of all related data processing functions, with the intention to integrate further sales and accounting systems. Candidates must therefore possess a sound accounting background.

Applicants must prove operations experience on Burroughs equipment or a comparable mini-computer, including the design and implementation of commercial accounting procedures.

Salary is negotiable and full details should be sent to:

SMR
Sales & Marketing Recruiters Ltd
A Specialised Marketing Services Company

SALES MEN
Exchange your job for a career
What if you are helping companies to make the most of their future productivity, do you ever think about the productivity of your own future?

A job is simply a task performed for a reward. A career might be described as a vehicle for enabling the individual to exploit his strengths, overcome his weaknesses and grow towards his maximum potential. Unfortunately, most sales people are in the former category. A year job runs out of challenge, please remember that our consultants have more direct experience of computer sales and management than any other recruitment company, the skills to give individual career guidance, a reputation throughout the industry for professional competence and high ethical standards and an extensive portfolio of employment opportunities in suit most individual needs.

Sales and Marketing Recruiters - The Career Consultants

BRACKNELL DISTRICT COUNCIL

SYSTEMS ANALYST/PROGRAMMER
c.£9000

To meet the challenge of continuing company growth, J. W. Thornton Ltd., manufacturers and retailers of high quality confectionery, require an experienced Systems Analyst.

You'll join a small team currently engaged in the production of systems on Hewlett Packard 3000 hardware. The work will involve the design, specification and testing of software systems and the implementation with users.

You should have at least 3 years' experience as a Systems Analyst together with the ability to communicate effectively. Additionally you will need to be flexible and self-motivated as the post will at times involve working on your own initiative.

The salary and fringe benefits are attractive, including relocation expenses, and the job offers a genuine opportunity to make a significant contribution to the future development of the company's computerised systems.

For an application form please write or telephone the Personnel Services Manager, J. W. Thornton Ltd., Derwent Street, Belper, Derby, DE5 1WP. Tel. Belper 4181. (0552)

COMPUTER PROGRAMMER

We are looking for an experienced programmer to join a small team involved in the use of a small IBM 3080 mainframe computer and supporting minicomputers to maintain and develop systems within a growing company. The role involves applying computer systems to commercial and technical work and to have a good knowledge of IBM 3080/3090.

The task will involve responsibility for analysing users' requirements and providing advice and assistance for assisting in the formulation of computer services for training programming staff.

Who will be a member of the Laboratory of the United Kingdom Atomic Energy Authority with considerable experience in the design and development of computer systems for the scientific and engineering community. The role involves applying computer systems to commercial and technical work and to have a good knowledge of IBM 3080/3090.

Successful candidates will be offered a salary with a starting salary in the range £8,000 to £10,000 p.a. Applicants with relevant experience may, however, be offered a salary higher in the range £10,000 to £12,000 p.a. in recognition of their experience. The successful candidate will also receive a comprehensive benefits package including a pension scheme, private medical insurance, and a company car.

For an application form please write or telephone the Personnel Services Manager, J. W. Thornton Ltd., Derwent Street, Belper, Derby, DE5 1WP. Tel. Belper 4181. (0552)

SALES BIT
How to become a head-hunter-Part 1
Hit-men of the industry

MOST readers of this column know I am involved in recruitment and training, and conversely, the people I meet during the course of my business activity are aware of my literary efforts. This leads to interesting conversations about the many facets of selling, but invariably the topic gets around to the recruitment process and how we go about finding people for jobs and jobs for people.

It is, in my opinion, a job that is suited only to individuals who truly care about the welfare of others, and who have the direct occupational experience and knowledge of the prevailing circumstances of a given industry to give people the necessary guidance to make a sensible career move.

The effective recruiter is able to transcend the myopic subjectivity of a candidate's present employment and give him or her a view of the available world. He identifies the candidate's strengths and weaknesses and attempts to marry them with a job which will exploit the former and compensate for the latter. The social and ethical considerations are most profound for the dedicated recruitment consultant, and that is why I react negatively when people, usually quite innocently, call me a "head-hunter".

This is a term that has crept stealthily into recruitment like an insidious pollutant, to stain the character of all its participants. There is an enormous difference between those who can truly be called recruitment consultants and the predators of the industry who may operate in executive splendour within a large international mail.

Yesterday someone paid me what he considered a compliment. His words were to the effect: "You must be one of the best known head-hunters in the computer business." Ego trip? No thank you!

I realised the man was being nice and I didn't want to repay his generosity with an apparently justified reprimand, but I did steer the conversation around to discussing what is loosely called "head-hunting" to make it clear that it was a process unsuited to his requirements in particular, a facility to be avoided in general and certainly not a label I wanted sticking on my organisation.

"Head-hunting" is, on the face of it, attractive to the customer because he specifies the kind of person he requires, and without further effort, he is suddenly confronted by individuals who fit the description.

More next week!

Alan Williams

Computer Manager
S01/2 - (£8190-£9528)

Applications are invited for this new post from suitably qualified and experienced persons to take charge of the Authority's computer operations under the direction of the Chief Financial Officer.

- Applicants should preferably have the benefit of the following:
1. Management experience in the computer field.
 2. Experience of ICL equipment and, in particular, a sound working knowledge of VME-B.
 3. Minimum of 18 months' experience of CDBOL programming.
 4. Knowledge of systems analysis would be an advantage.
 5. The Computer Science Degree or equivalent, plus two years' experience.

The position offers a rare opportunity for an ambitious individual to broaden his/her experience very quickly and will appeal to those who thrive on a challenge, and who are prepared to accept the responsibilities and allowances payable in appropriate cases.

Further details and application forms for return by 4 March, 1982, may be obtained from the Personnel Officer, District Office, College Heath Road, Mildenhall, Bury St Edmunds, Suffolk IP28 7EY, or telephone Mildenhall 718600 (Extension 231).

Communications Software Development
Salaries to £16K
'State-of-the-Art Implementations'

Sperry Univac set up the International Distributed Systems Centre in London in 1979. Since then it has been in the forefront of communications systems development for major customers worldwide. Current project, based in London, include implementations for customers in Manchester, Paris, Copenhagen, Stockholm, Zurich, Helsinki, Hong Kong and Johannesburg.

A small number of vacancies have become available for the following staff:

Communications Software Implementors
You should have 5-7 years experience of successful implementation of communications related software. In particular you should have knowledge of three or more of the following:

- *Public Data Network
- *Network Architecture and Protocols
- *Network Management and Control
- *Line Protocol Handlers
- *Message Switching

SNA Specialist
In addition to the above there is a vacancy for an IBM specialist who knows the internals of SNA software of detail (VTAM interfaces). Ideally you will have built a SNA Emulator or Gateway in a non-IBM product.

The rewards package is excellent including pension scheme and other company benefits. All the positions are based in a modern, attractive building near Marble Arch with easy access to mainline and underground stations. The opportunity for short-term travel to customers locations worldwide and to other development centres in the U.S.A. will be provided.

If you are interested in one of these positions please telephone: Mrs. Valerie Morton, Personnel Officer, Sperry Univac Centre, Stonebridge Park, London NW10 8LS. Tel: 01-985 0511 ext. 3889. (0508)

*No software or floating point processor is offered with this package.

The PDP11/60 was introduced by Digital as a very fast processing system for scientific and technical "number crunching" applications. It is still one of the fastest PDP11 family computers available. Benchmark tests, including Whetstone, show that the PDP11/60 has processor performance characteristics equivalent to 85% of a similar configured PDP11/70 system in heavy floating point calculations and approximately 80% in an average mix of fixed and floating point.

For further information telephone Mike Molloy/Bill Sellers on 0734 594220.

Anything you need for your Disk Drives - we can help.
We are your specialist all over the world.

Our Range:

Magnetic disk drives DRI, Diablo, Ampex, CDC - Sales and Service.
Magnetic heads for all disk drives, new, refurbished or exchange.
Keeping in stock 6,000 brand new heads and 8,000 refurbished.
Magnetic tape heads, new, refurbished or exchanged.
Air filters for magnetic disk drives of all manufacturers.
Disk/tape controllers and multiplexers for Data General.
High speed disk controllers for DG Nova and Eclipses.
Check with us, GE cartridges and fix platters.
